František NEUMAN

Scientific publications

1. Sur les équations différentielles linéaires du second ordre dont les solutions ont des racines formant une suite convexe, Acta Math. Acad. Sci. Hungar. 13 (1962), 281-287.

2. On a certain ordering of the vertices of a tree, Časopis Pěst. Mat. 89 (1964), 323-339.

3. Sur les équations différentielles linéaires oscillatoires du deuxème ordre avec la dispersion fondamentale $\phi(t) = t + \pi$, Bull. Polyt. Inst. Jassy 10 (14), (1964), 37-42.

4. (with M. Sekanina) Equivalent systems of sets and homeomorphic topologies, Czechoslovak Math. J. 15 (90), (1965), 323-328.

5. Construction of second-order linear differential equations with solutions of prescribed properties, Arch. Math. (Brno) 1 (1965), 229-246.

6. On ordering vertices of infinite trees, Časopis Pěst. Mat. 91 (1966), 170-177.

7. Note on the second phase of the differential equation $y'' = q(t)y$, Arch. Math. (Brno) 2 (1966), 56-62.

8. Criterion of periodicity of solutions of a certain differential equation with a periodic coefficient, Ann. Mat. Pura Appl. 75 (1967), 385-396.

9. Extremal property of the equation $y'' = k^2 y$, Arch. Math. (Brno) 3 (1967), 161-164.

10. Relation between the distribution of the zeros of the solutions of a 2nd order linear differential equation and the boundedness of these solutions, Acta Math. Acad. Sci. Hungar. 19 (1968), 1-6.

11. Centroaffine invariants of plane curves in connection with the theory of the second-order linear differential equations, Arch. Math. (Brno) 4 (1968), 201-216.

12. Note on a bounded non-periodic solutions of the second-order linear differential equations with periodic coefficients, Math. Nachrichten 39 (1969), 217-222.

13. On bounded solutions of a certain differential equation, Proceedings of the Conference on Differential Equations and Their Applications, Equadiff 2, Bratislava 1966, Acta Fac. R. N. Univ. Comenian., Math. 17 (1969), 213-215.

14. On the coexistence of periodic solutions, J. Diff. Equations 8 (1970), 277-282.

15. An explicit form of the differential equation $y'' = q(t)y$ with periodic solutions, Ann. Mat. Pura Appl. 85 (1970), 295-300.

16. On the Liouville transformation, Rend. Mat. 3 (1970), 133-140.

17. A note on differential equations with periodic solutions, Arch. Math. (Brno) 6 (1970), 189-192.

18. Construction of differential equations with coexisting periodic solutions, Bull. Polyt. Inst. Jassy 14 (20), (1970), 67-75.

19. Note on Kummer's transformation, Arch. Math. (Brno) 6 (1970), 185-188.

20. Closed plane curves and differential equations, Rend. Mat. 3 (1970), 423-433.

21. Periodic curvatures and closed curves, Atti Accad. Naz. Lincei Rend. Cl. Sci. Fis. Mat. Natur. (8), 48 (1970), 494-498.

22. Some results concerning Abel's equation in the theory of differential equations and consequences for the affine geometry of closed plane curves, Aequationes Math. 4 (1970), 282-284.

23. (with F. M. Arscott and M. Greguš) Three-point boundary value problems in differential equations, J. London Math. Soc. (2), 3 (1971), 429-436.

24. A role of Abel's equation in the stability theory of differential equations, Aequationes Math. 6 (1971), 66-70.

25. L^2-solutions of $y'' = q(t)y$ and a functional equation, Aequationes Math. 6 (1971), 162-169.

26. Linear differential equations of the second order and their applications, Rend. Mat. 4 (1971), 559-617.

27. Some results on geometrical approach to linear differential equations of the n-th order, Comm. Math. Univ. Carol. 12 (1971), 307-315.

28. A note on Santaló's isoperimetric theorem, Revista Mat. Fis. Teor. Tucuman 21 (1971), 203-206.

29. Geometrical approach to linear differential equations of the n-th order, Rend. Mat. 5 (1972), 579-602.

30. Oscillation in linear differential equations, Proceedings of the Conference Equadiff 3, Brno 1972, 119-125.

31. Distribution of zeros of solutions of $y'' = q(t)y$ in relation to their behaviour in large, Studia Sci. Math. Hungar. 8 (1973), 177-185.

32. On n-dimensional closed curves and periodic solutions of linear differential equations of the n-th order, Demonstratio Mat. 6 (1973), 329-337.

33. On a problem of transformations between limit-circle and limit-point differential equations, Proc. Roy. Soc. Edinburgh, Sect. A 72 (1973/74), 187-193.

34. On two problems about oscillation of linear differential equations of the third order, J. Diff. Equations 15 (1974), 589-596.

35. Global transformation of linear differential equations of the n-th order, Knižnice odb. a věd. spisů VUT Brno, B-56 (1975), 165-171.

36. On solutions of the vector functional equation $y(\xi(x)) = f(x) \cdot A \cdot y(x)$, Aequationes Math. 16 (1977),245-257.

37. (with J. Vosmanský) O funkcijach (posledovatel'nostjach), proizvodnyje (differencii) kotorych znakopostojany, Doklady Ak. Nauk Azer. SSR 34 (1978), 8-12.

38. (with S. Staněk) On the structure of second-order periodic differential equations with given characteristic multipliers, Arch. Math. (Brno) 13 (1977), 149-157.

39. Linear differential equations with periodic coefficients in the critical case,

An. Sti. Univ. " Al. I. Cuza " Jassy Sect. I a Mat. 23 (1977), 325-328.

40. Categorial approach to global transformations of the n-th order linear differential equations, Časopis Pěst. Mat. 102 (1977), 350-355.

41. Limit circle classification and boundedness of solutions, Proc. Roy. Soc. Edinburgh, 81 A (1978), 31-34.

42. Global properties of the n-th order linear differential equations, Proceedings of Equadiff 4, Praha 1977, Lecture Notes in Mathematics 703, Springer, Berlin 1979, 309-319.

43. Invarianty linejnych differencial'nych uravnnij 3-go porjadka i metod podvinogo repera E. Kartana, Differencial'nyje Uravnnija 14 (1979), 398-404.

44. A generalization of Floquet theory, Act a Math. Univ. Comenian. 39 (1980), 53-59.

45. Preobrazovanija linejnych differencial'nych uravnenij n-go porjadka, Sborník 6. vědecké konference Vysoké školy dopravní v Žilině, Sept. 1979, 11-19.

46. On transformations of differential equations and systems with deviating argument, Czechoslovak Math. J. 31 (106), (1981), 87-90.

47. Global theory of linear differential equations of the n-th order, Proceedings of the Colloquium on Qualitative Theory of Differential Equations, Szeged-Hungary, August 1979, Ser. Coll. Math. Soc. J. Bolyai, North-Holland Publ. Co. 1981, 777-793.

48. Second order linear differential systems, Ann. Sci. cole Norm. Super. (Paris) 13 (1980), 437-449.

49. Functions of two variables and matrices involving factorizations, C. R. Math. Rep. Acad. Sci. Canada 3 (1981), 7-11.

50. Factorizations of matrices and functions of two variables, Czechoslovak - Math. J. 32 (107), (1982), 582-588.

51. Functions of the form $\sum_{i=1}^{N} f_i(x)g_i(t)$ in L_2, Arch. Math. (Brno), 18 (1982), 19-22.

52. Simultaneous solutions of a system of Abel equations and differential equations with several deviations, Czechoslovak Math. J. 32 (107), (1982), 488-494.

53. Global canonical forms of linear differential equations, Math. Slovaca 33 (1983), 389-394.

54. Linear differential equations - global theory, Proceedings of Equadiff 5, Bratislava 1981, Teubner-Texte zur Mathematik, Leipzig 1982, 272-275.

55. Teorija global'nych svojstv obyknovennych linejnych differencial'nych uravnnij n-go porjadka, Differencial'nyje Uravnnija 19 (1983), 799-808.

56. A survey of global properties of linear differential equations of the n-th order, Proceedings of the Conference on Ordinary and Partial Differential Equations, Dundee 1982, Lecture Notes in Mathematics 964, Springer Berlin, 548-563.

57. (with W. N. Everitt) A concept of adjointness and symmetry of differential expressions based on the generalized Lagrange identity and Green's formula, Proceedings: Ordinary Differential Equations and Operators, Dundee 1982,

Lecture Notes in Mathematics 1032, Springer Berlin, 161-169.

58. From local to global investigations of linear differential equations of the n-th order, Jahrbuch Überblicke Mathematik 1984, 55-80.

59. Criterion of global equivalence of linear differential equations, Proc. Roy. Soc. Edinburgh 97 A (1984), 217-221.

60. Stationary groups of linear differential equations, Czechoslovak Math. J. 34 (109), (1984), 645-663; Abstract: C. R. Acad. Sci. Paris 299, Série I, No. 8, (1984), 319-322.

61. A vector functional equation and linear differential equations, Aequationes Math. 29 (1985), 19-23.

62. A note on smoothness of the Stäckel transformation, Prace Mat. WSP (Kraków) 11 (1985), 147-151.

63. Covariant constructions in the theory of linear differential equations, Časopis Pěst. Mat. 111 (1986), 201-207.

64. Global theory of ordinary linear homogeneous differential equations in the real domain, I + II, Aequationes Math. 33 (1987), 123-149 + ibid. 34 (1987), 1-22.

65. Solution to the Problem No. 10 of N. Kamran, Proceedings of the 23rd Intern. Symp. on Functional Equations, Gargnano-Italy 1985, Univ. of Waterloo, Ont., Canada, 60-62.

66. Functional Equations (in Czech), 104 pages, SNTL, Praha 1986.

67. Ordinary linear differential equations - a survey of the global theory, Proceedings of Equadiff 6, Brno 1986, Lecture Notes in Mathematics 1192, Springer Berlin, 59-70.

68. Oscillatory behavior of iterative linear ordinary differential equations depends on their order, Arch. Math. (Brno) 22 (1986), 187-192.

69. On iteration groups of certain functions, Arch. Math. (Brno) 25 (1989), 185-194.

70. Another proof of Borůvka's criterion on global equivalence of the second order ordinary linear differential equations, Časopis Pěst. Mat. 115 (1990), 73-80.

71. Smoothness as an invariant property of coefficients of linear differential equations, Czechoslovak Math. J. 39 (114), (1989), 513-521.

72. On a canonical parametrization of continuous functions, Opuscula Math. (Kraków) 1335 (1990), 185-191.

73. On Halphen and Laguerre-Forsyth canonical forms of linear differential equations, Arch. Math. (Brno) 26 (1990), 147-154.

74. Transformations and canonical forms of functional-differential equations, Proc. Roy. Soc. Edinburgh 115 A (1990), 349-357.

75. Finite sums of products of functions in single variables, Linear Algebra Appl. 134 (1990), 153-164.

76. Global Properties of Linear Ordinary Differential Equations, 334 pages, Mathematics and Its Applications, East European Series 52, Kluwer Academic Publishers (with Academia Praha) Dordrecht / Boston / London 1991,

ISBN 0-7923-1269-4.

77. (with Th. M. Rassias) Functions decomposable into finite sums of products, Constantin Carathéodory - An International Tribute, World Scientific Publ. Co., Singapore 1991, vol. II, 956-963.

95. d'Alembert equation for finite sum decompositions, In: Encyclopaedia of

Mathematics, Suppl. III, 116, Kluver Acad. Press, Dordrecht 2001, ISBN 1-4020-0198-3.

96. Transformations and global properties of differential equations, In: Proceedings of Colloquium on Differential and Difference Equations, Brno 2002, Folia FSN Univ. Masaryk Brunensis, Mathematica 13, 2003, 193–204, ISBN 80-210-3149-2.

97. Smoothness versus discreteness, In: Proceedings Mathematical and Computer Modelling in Science and Engineering, Prague 2003, 272 – 276, ISBN 80-7015-912-X.

98. A general construction of linear differential equations with solutions of prescribed properties, Applied Math. Letters 17 (2004), 71 – 76.

99. Discretization of smooth systems, In: Proceedings XXIst International Colloquium, Vyškov 2003, [CD-ROM] (4 pages), ISBN 80-7231-105-0.

100. Algebraic analogues of differential equations for nondifferentiable functions, In: Thesis of International Conference Dynamical System Modelling and Stability Investigation, Kiev 2003, 140, ISBN 5-966-581-059-6.

101. Differential and Discrete Representations of Objects in Ehresmann Groupoids, In: Abstracts of International Conference on Differential Equations and Applications, Žilina, Slovakia, June 30 - July 4, 2003, 24 – 25, ISBN 80-8070-10100-8.

102. Smooth and discrete systems – algebraic, analytic, and geometrical representations, Advances in Difference Equations, vol. 2004:2 (2004), 111 – 120, ISSN 1687-1820, e-ISSN 1687-1812.

103. Constructing and solving equations – inverse operations, Aequationes Math. 70 (2005), 77 – 87. See also Report on the 44th ISFE, Louisville, Kentucky USA, May 14–20, 2006 in Aequationes Math. 2007.

104. What is a differential equation?, Proceedings 3rd Mathematical Workshop, FAST VUT Brno 2004, 75 – 76, ISBN 80-214-2741-8.

105. Coordinate description of analytic relations, Mathematica Bohemica, 131 (2006), 197 – 210, ISSN 0862-7959;
Coordinate description of analytic objects, 4 pages, poster at XXIIIth International Colloquium, University of Defence Brno, May 2005, announcement of the above paper.

106. On representation of a smooth system by discrete one, Proceedings of the 10-th International Modelling School of AMSE-UAPL, Alushta, Crimea, 12-17 September 2005 (Ukraine), 149 – 154, ISBN 83-7199-373-0.

107. Systems of not sufficiently smooth functions, Technical News, 1,2 (20,21) (2005), 95 – 101.

108. The role of the second order equations in higher order linear differential equations, Technical News 1(22), 2(23), (2006), 98 – 101.

109. A survey of algebraic methods in linear differential equations, Studies of the University of Žilina, Mathematical Series, 21 (2007), 23 – 34, ISSN 1336-149X; see also
Algebraic Methods in Linear Differential Equations - a Survey, abstract of the talk at the Conference on Differential and Difference Equations and

Applications, Rájecké Teplice, Univ. Žilina, Slovak Rep., June 26–30, 2006, 38–39, ISBN 80-8070-563-1.

110. Transformations of differential equations – their algebraic and geometric aspects, 10 pages, Proceedings of XXV-th International Colloquium on the Management of Educational Process, University of Defence, Brno, May 17, 2007, ISBN 978-80-7231-228-3.

111. Structure of solution spaces via transformation, accepted in Appl. Math. Letters as AML2484;
announced as poster: Covariant aspects of structures of solution spaces, at International Mathematical Workshop, FAST VUT Brno 2006, October 19, 2006, 85 – 86, ISBN 80-214-3282-9.

112. Mathematical structures generated by differential equations, 9 slides + 10 pages, CD-ROM, Workshop on Differential Equations - Boundary Value Problems and Related Topics, Institute of Mathematics, Academy of Sciences of the Czech Republic, September 16-20, 2007, Hejnice, Czech Republic.

113. On efficiency of the criterion for equivalence of linear differential equations, 7 pages, prepared for publication.

February 2008
