

The Laboratory for infectious diseases common to humans and (non-human) primates (HPI-lab <http://www.hpi-lab.com/en>) together with the Institute of Vertebrate Biology CAS (www.ivb.cz) would like to invite you to a talk of:

Terence Fuh

(Primate Habituation Programme, Dzanga Sangha Protected Areas, Central African Republic)

"In the front-line of gorilla conservation"

Where: assembly hall of the Institute of Vertebrate Biology, CAS; Kvetna 8, Brno

When: 4th September 2017, 2 p.m.

Launched in 1997, the Primate Habituation Program in Dzanga-Sangha Protected Areas promotes tourism as a conservation tool through "non-consumptive" sustainable use of wildlife, being the vital link between conservation and community. The availability of habituated gorillas has facilitated research in diverse fields (e.g. ecology & behavior, health & diseases, tourism impact, etc.) leading to numerous academic publications. It is recognized as the most successful Western Gorilla research and tourism program in Central Africa.
