Loan conditions

1. Loans must be returned by the date specified on the loan form. Specimens are lent initially for two months; request for extension of the loan period must be made in writing to the curator of the collection, well before the date for return of the loan.
2. All specimens must be maintained and returned in the same preservative in which they were sent.
3. Material on loan remains the property of the borrower and must not be transferred to another person or removed from the institution specified on the loan form without prior permission of curator of the collection.
4. Specimens may not be dissected, stained, or altered in any other way without prior permission. Remounting microscopic slides is possible only after prior permission of the curator. All preparation made from them must be returned in the usual way.
5. Students, and others not in permanent employment, will only receive loans in the name of their supervisors who will be held responsible for the safe keeping and return of the material.
6. All labels must be kept with the specimens and returned with them. Type specimens selected from loan material should be clearly labeled as such.
7. Loans returned by post should be securely packed, registered or insured as appropriate and wherever possible should be sent by registered airmail to avoid delay.
8. The conditions set out here will be strictly applied and failure to comply may result in the loss of borrowing privileges.

We will be appreciated if one copy of each publication based on loaned material could be presented to the Laboratory of parasitic Arthropods of the Institute of Parasitology CAS.
