Created in 1957 from the Developmental Workshops of the Czechoslovak Academy of Sciences in Brno, the Institute carries out research on physical methods, special technologies and unique instrumentation principles in the fields

of electron optics and microscopy, nuclear magnetic resonance, bioinformatics and coherence light optics. Pursuant to Act No. 341/2005 Coll., the Institute became a public research institution as of 1 January 2007.

Part of its task is the construction of high-quality technical components and systems in the fields of ultra-high vacuum, cryotechnology and super-conductivity. Interdisciplinary research on the microstructure of matter is carried out in an attempt to obtain results that can have practical application in biology, chemistry, medicine, ecology and physics.

More detailed information about the organisational structure of the Institute and its research and specialised units can be found at the following URL:
