

## **Petr Bouř**, miniprogram for the elections to the Board of Institute

### What I like at IOCB:

- top research at the national and world level
- teams mostly treated by objective criteria
- good technical etc. background, stimulating environment

### What I do not like

- chaotic and expensive reconstruction works (this improved latest years)
- overemphasized scientometry, formal approach
- when unclear rules give space to intrigues

### What I want in the Board

- keep its role limited, minimum bureaucracy, ensure that scientist have time for work
- but keep it as a partner/opposition to the director (it is the only democratic institution we have!)
- director's election must be fair, equal chances to possible candidates, competition of (written) programs
