

GOLDLANE

(UEB 3812/2) was produced by crossing UEB 3138/1 with Bohemia
Community Plant Variety Rights EU 26963 from 22. 03. 2010
United States Patent PP21,413 from 26. 10. 2010

- Origin:** Institute of Experimental Botany Prague (Strizovice), CZ
- Tree:** Diploid, vigorous, compact columnar type
- Blossom:** Mid-season
- Picking time:** Mid-October, about 10 days after Golden Delicious, eating maturity since November
- Productivity:** good, usually requires thinning to produce annual crops
- Keeping quality:** In natural storage until March
- Fruit:** Large, broad globose to round conical, stem short, skin smooth, appears russet free, green yellow becoming yellow during storage, over color absent, flesh yellowish, firm, crisp, very juicy, with very good aromatic flavor and well balanced sugar and acid levels
- Diseases:** Scab resistant with *Vf* gene, tolerant to mildew
- Comment:** A late robust variety with compact columnar tree type, resistant to scab (*Vf*), suitable especially as a good dessert apple for home gardens, its large yellow, long keeping firm, crisp and very juicy fruits could have potential for juice industry
