

ADMIRAL

(UEB 3824/1) is a hybrid between Mira and Bohemia
Community Plant Variety Rights EU 31550 from 20.02.2012

- Origin:** Institute of Experimental Botany Prague (Střížovice) CZ
- Tree:** Triploid, very vigorous, spreading, forms fruiting spurs moderately
- Blossom:** Mid-season, regular, usually does not require fruit thinning
- Picking time:** Beginning October, shortly after Golden Delicious
- Productivity:** Precocious, medium, regular
- Keeping quality:** Excellent, in natural storage until end of May, very good shelflife
- Fruit:** Medium to large size, shape flat globose, skin smooth, russet free, ground color green at harvest turn to yellow during storage, over color (70-80%) initially dark red solid flush then becomes brightly red, flesh firm, crisp, juicy with very good taste
- Diseases:** Resistant to scab (*Vf* and on assumed polygenic basis), tolerant to mildew, susceptible to bitter pit, mainly on young trees
- Comment:** Robust, healthy, scab resistant variety with excellent keeping qualities and taste. Suitable rather for organic growing with low intensity of fertilization and measures against appearance of bitter pit
