

MOONLIGHT

(UEB 3727/4) was produced by crossing Goldstar with Telamon (Walz)

Community Plant Variety Rights EU 26759 from 22. 02. 2010

United States patent PP21,511 from 23. 11. 2010

- Origin:** Institute of Experimental Botany Prague (Strizovice), CZ
- Tree:** Diploid, moderate vigor, compact columnar type
- Blossom:** Mid-season, flowers heavily and quite regularly
- Picking time:** Early to mid-October, about one week after Golden Delicious, eating maturity since November
- Productivity:** Very precocious, produces nearly regular heavy crops
- Keeping quality:** In natural storage until March
- Fruit:** Medium, conical to round conical, stem length medium, skin smooth, appears russet free, yellow green ground color, seldom with a slight red-orange blush, flesh yellowish, medium to firm, crisp, fine grained texture, juicy, flavor good, aromatic, well balanced sugar and acid levels
- Diseases:** Scab resistant with *Vf* gene, tolerant to mildew
- Comment:** A winter, scab resistant, good dessert apple variety with compact columnar type, good eating and storage qualities, precocious and heavy in bearing, suitable for home gardens and possibly also for commercial dessert apple production and for juice industry
