

## HELIODOR

(UEB 3264/1) is a hybrid Golden Delicious x Topaz  
Community Plant Variety Rights EU 23532 from 13. 10. 2008

- Origin:** Institute of Experimental Botany Prague (Strizovice), CZ
- Tree:** Diploid, medium vigorous, spreading, has long vegetation season, leaves remain for a long time on trees similarly as in Elstar
- Blossom:** Mid-season
- Picking time:** Early October about with Golden Delicious, eating maturity about 2 weeks after picking
- Productivity:** Semi-precocious, heavy, does require fruit thinning for regular bearing
- Keeping quality:** In natural storage until March
- Fruit:** Size medium to large, shape globose to conical, moderate ribbing, bright yellow usually without a blush, stem long, skin smooth, slightly waxy and shiny, russet free, flesh yellowish medium firm, crisp, very juicy with sweet-subacid flavour and good taste
- Diseases:** Resistant to scab (Vf), very low susceptibility to powdery mildew
- Comment:** A late variety with attractive appearance suitable mainly for home gardens
