Electronics v.v.i. (www.ufe.cz)**

Technology of Optical Fibers

www.ufe.cz/dpt240

J. Proboštová & O. Podrazký, J. Mrázek, I. Kašík

Institute of Photonics and Electronics

v.v.i. = non-profit public research institution
a legal body of ASCR = non-university research

- medium-size institute
- ~ 100 employees (FTE)
- ~ 4 M€ turnover
- ~ 50 % inst. budget

*Prof. Jiří Homola
Head of UFE*

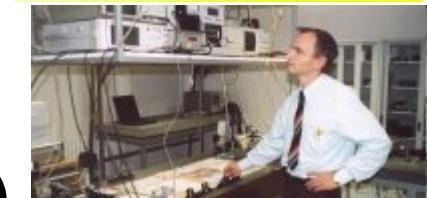

Institute of Photonics and Electronics

FUNDAMENTAL RESEARCH

Optical Biosensors (SPR Homola)

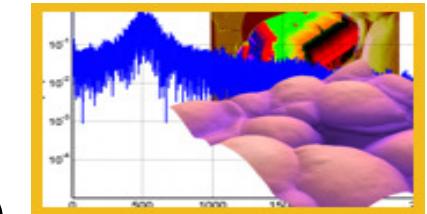

Fiber Lasers and Non-linear Optics (Honzatko)

Nanomaterials (SIMS Lorincik)

Bioelectrodynamics (Cifra)

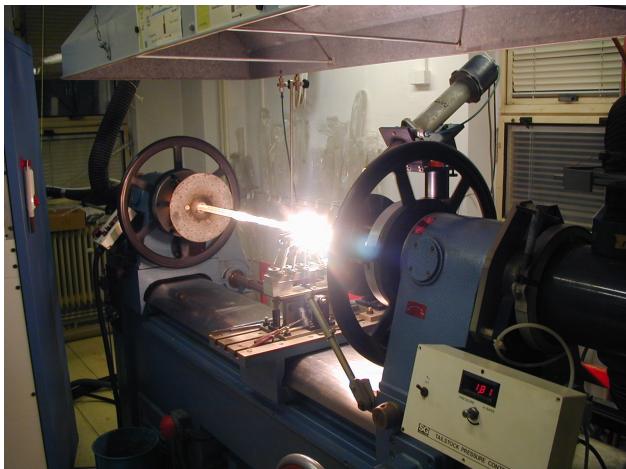

National Time and Frequency Standard (Kuna)

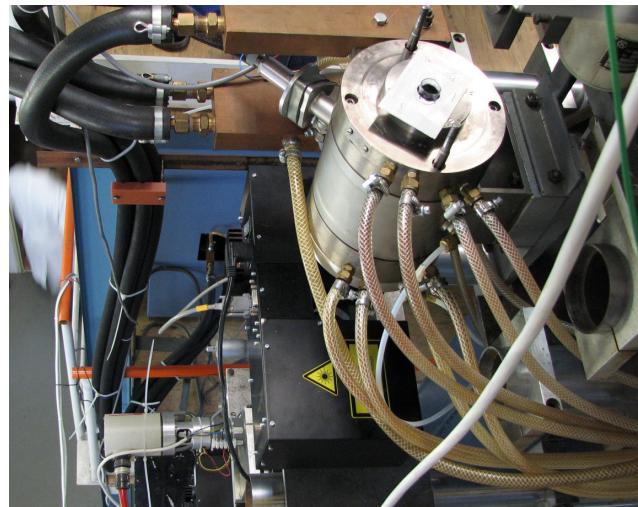

Technology of Optical Fibers

Special optical fibers and fiber components of novel materials or structures for fiber lasers (sensors)

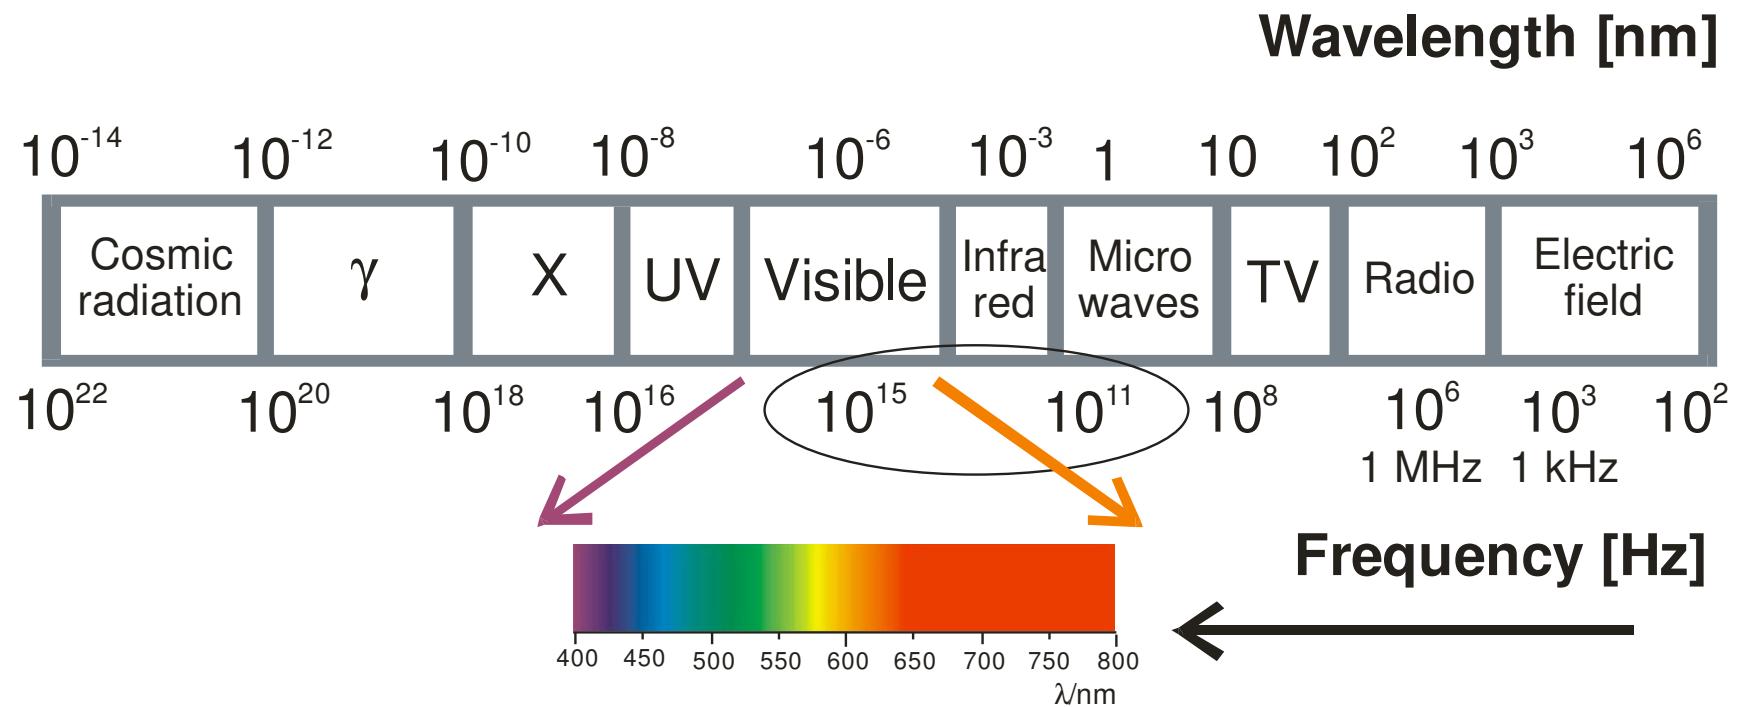

Preform
fabrication
(MCVD)

Fiber drawing
since 1979

Sol-gel
coatings

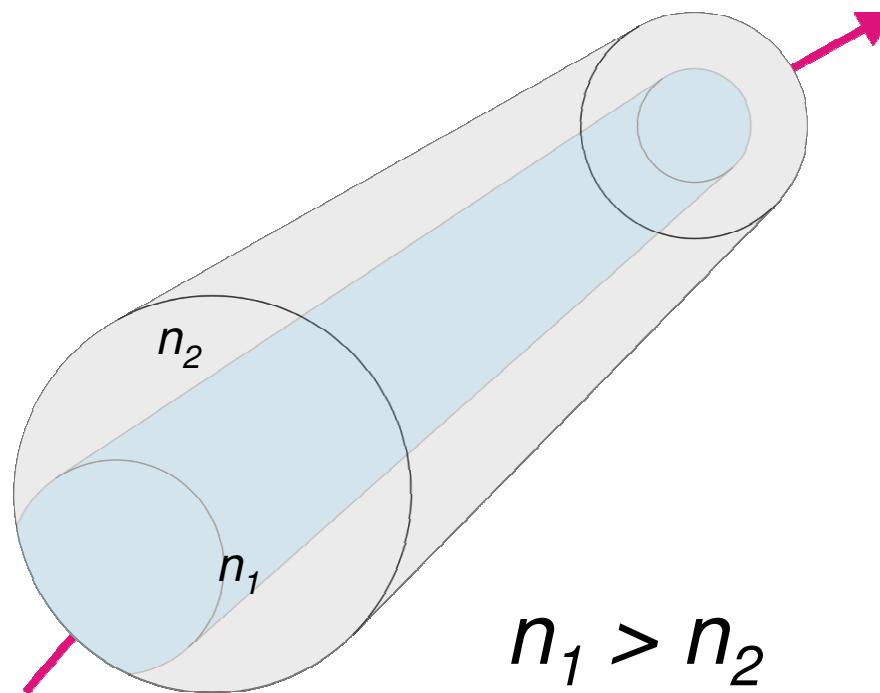

Why OPTICAL communication (fibers) ?

$$f = c / \lambda$$

c = speed of light

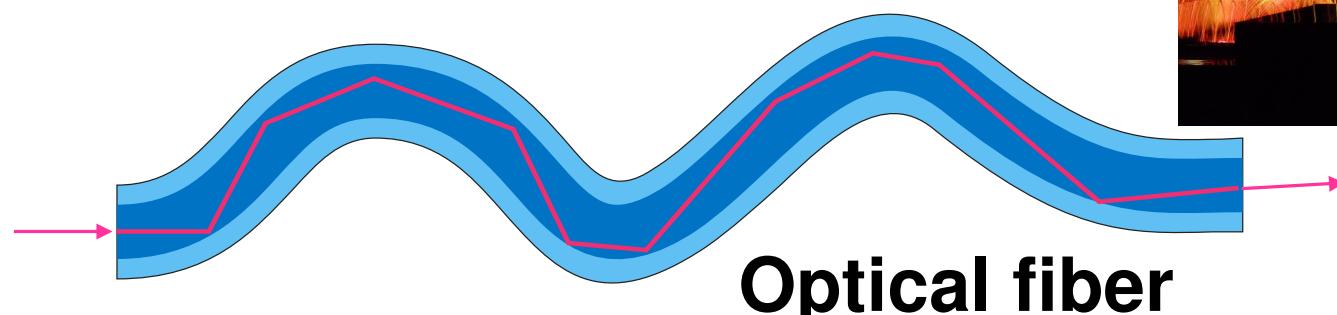

Waveguiding principle → optical fiber

W. Snell (~1620) : total reflection

J. Tyndall (1853) : **waveguide**

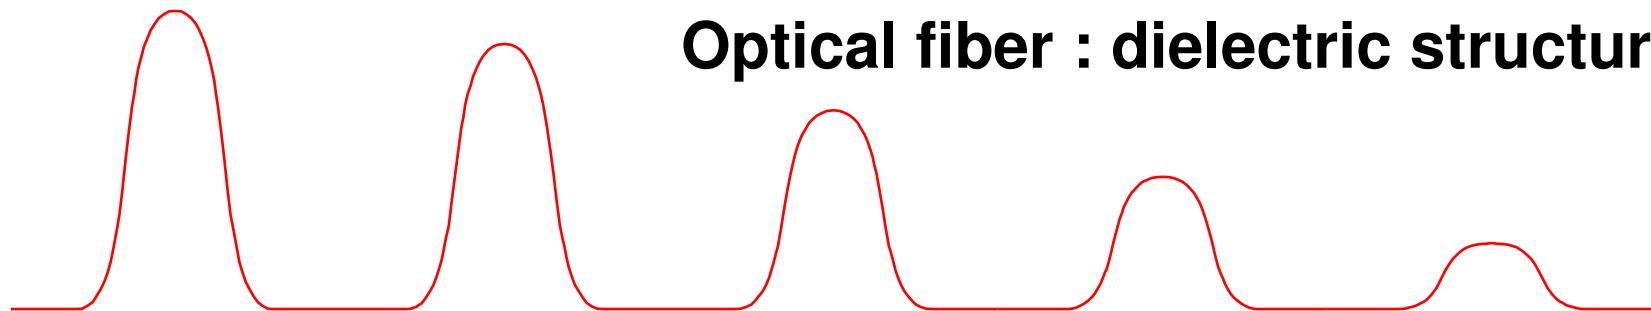

$n_{\text{water, glass, plexi}} > n_{\text{cladding, surroundings}}$

Optical fiber

Key issue : purity of material (\downarrow losses)

Optical fiber : dielectric structure ...

Optical losses in optical fibers

- the best : 0.2 dB/km ~ power losses only about 5% per km
- transparency of 3 mm of window-glass \approx 2 km of optical fiber

Charles K. Kao
Nobel prize
2009

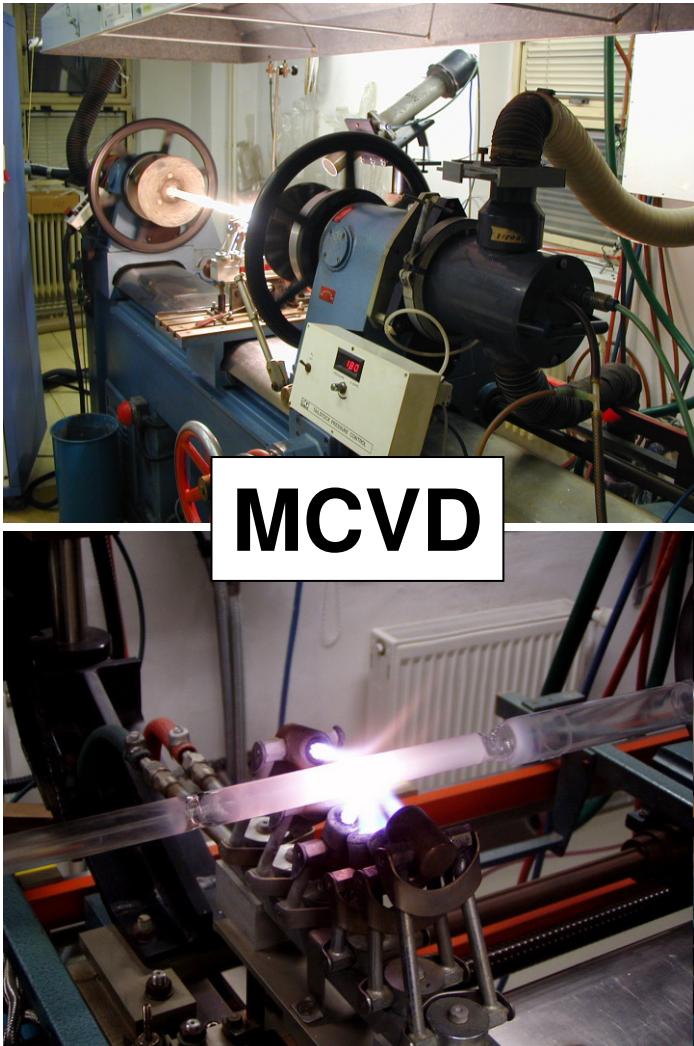

high-purity materials
max impurities
acceptable in ppb (10^{-9})

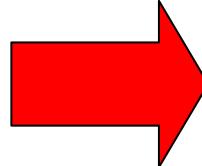

ULTRA-PURE TECHNOLOGIES

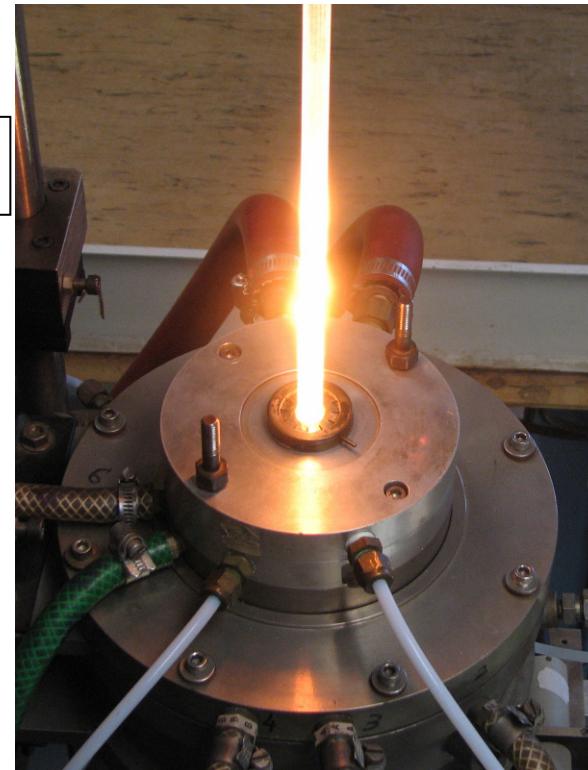

Optical fiber preparation

1. Preform

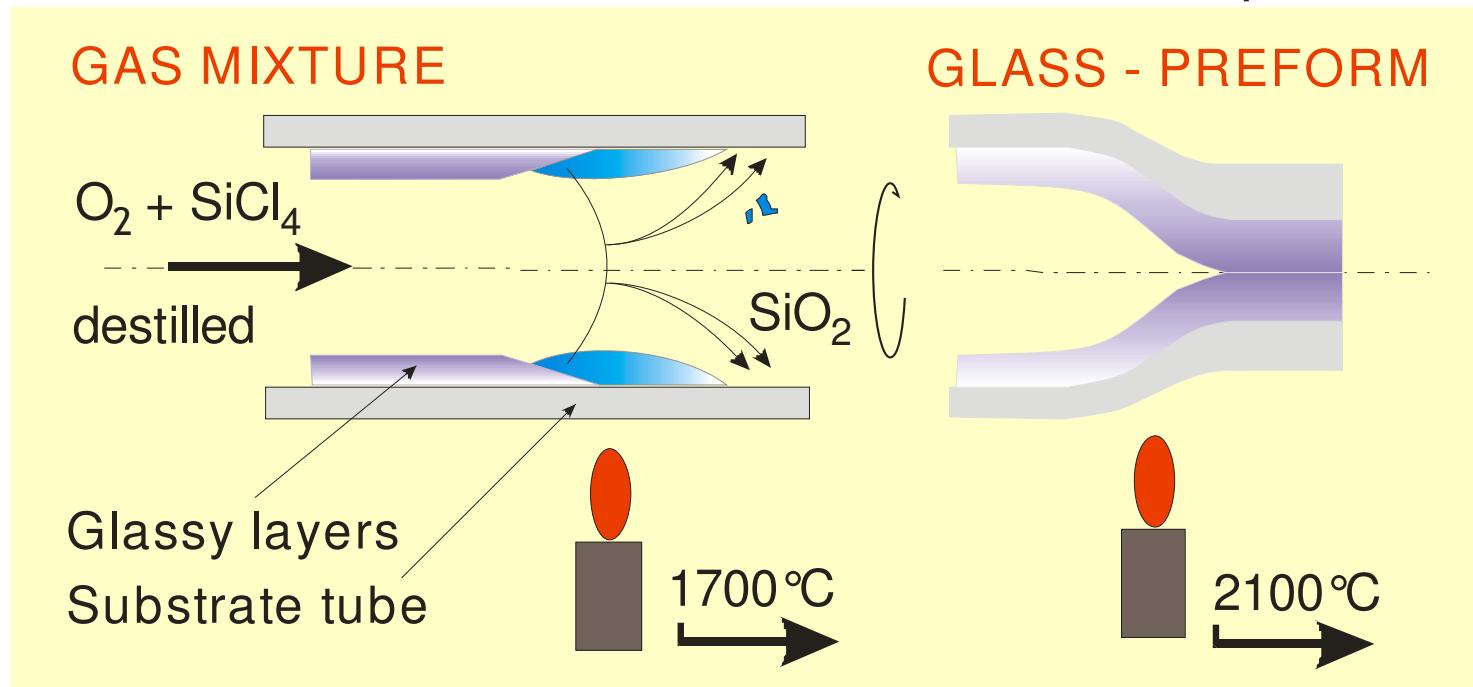

2. Fiber drawing

Ultra-pure technologies : preform

MCVD – Chemical Vapor Deposition

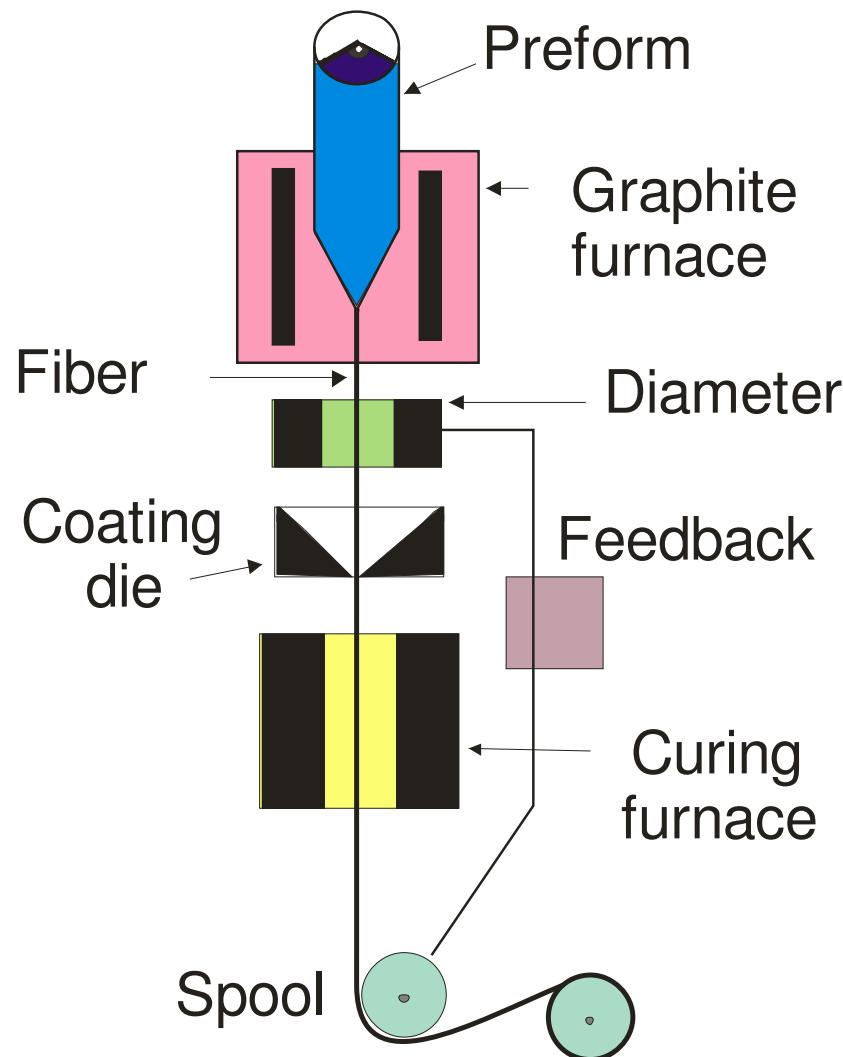

1. Deposition of layers

2. Collapse

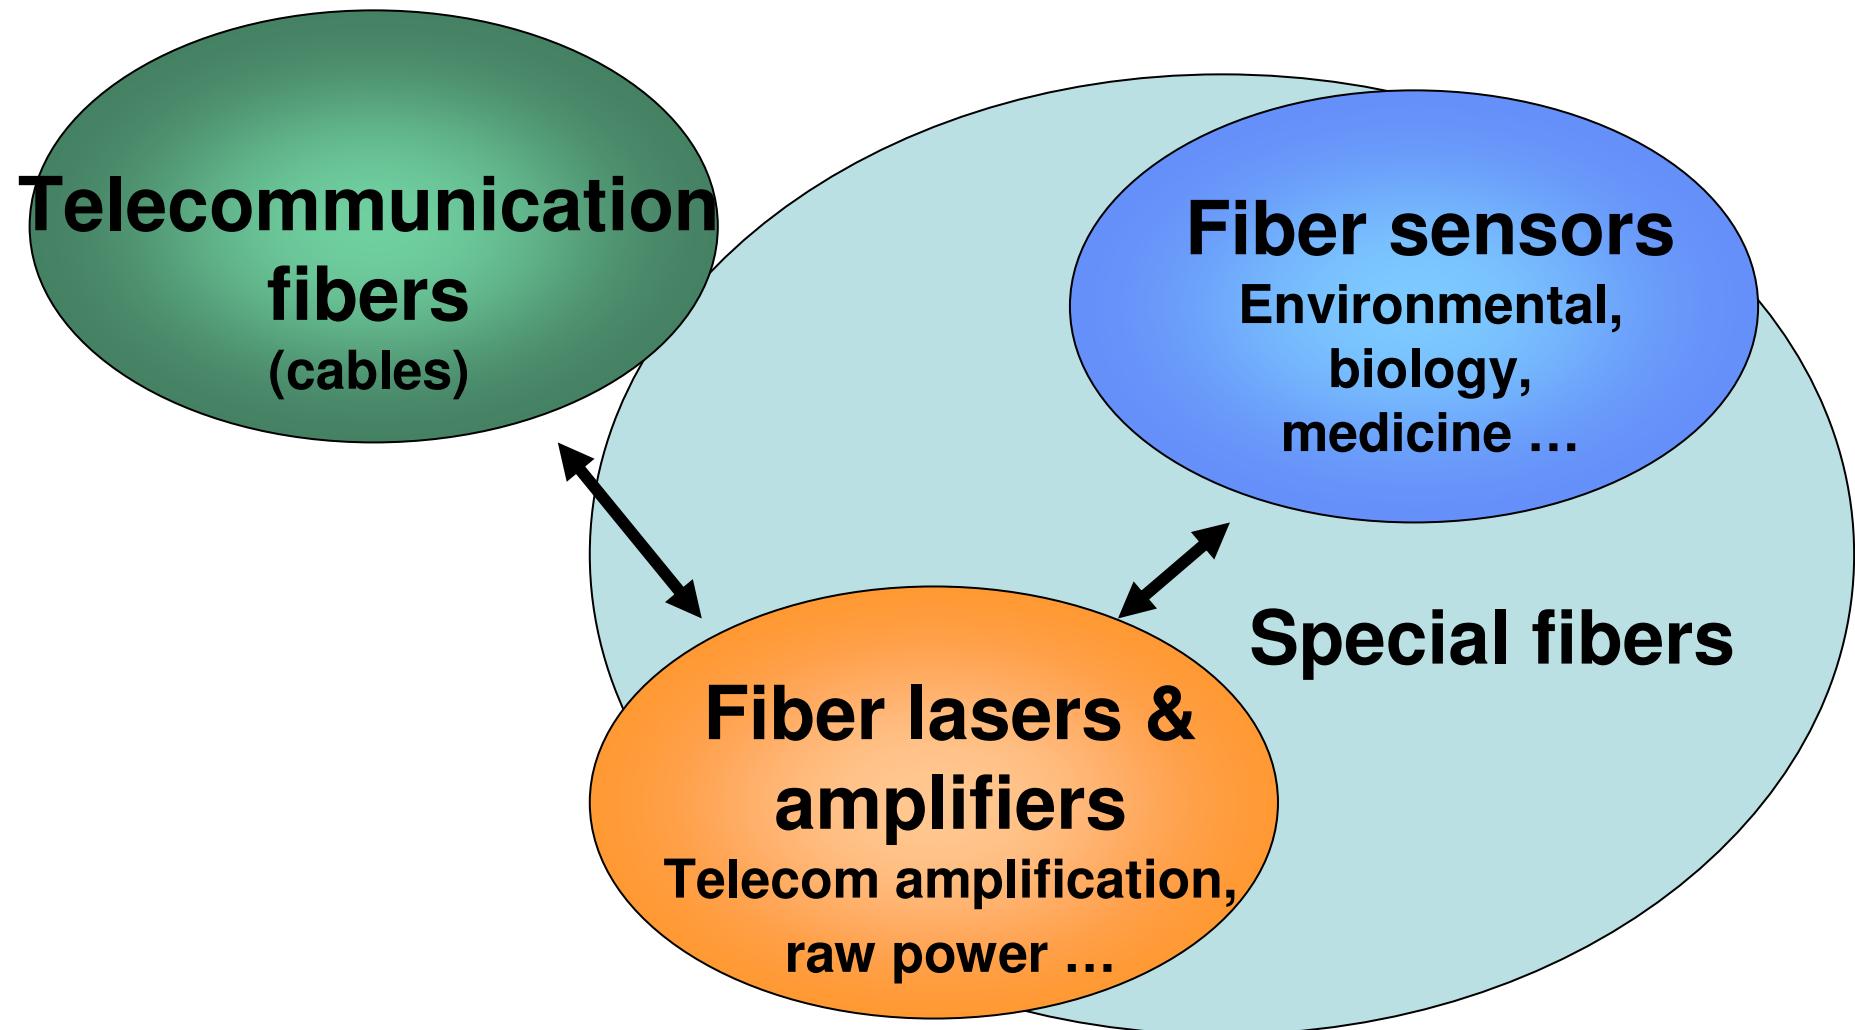

- Sequential deposition of thin ($\sim 1\text{-}20 \mu m$) glassy layers onto inner wall of silica tube => preform (rod)
- high purity (ppb impurities), high precision ($>1\%$) material

Drawing of optical fiber from preforms

- Diameter
80-1000 μm
- Temperature
1800-2100 $^{\circ}\text{C}$
- No textile
- No thermo-insulation

Application

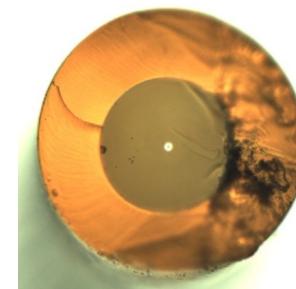

Telecommunication optical fibers Fiber lasers and amplifiers

Doped fibers

Double-clad

Multicore fibers

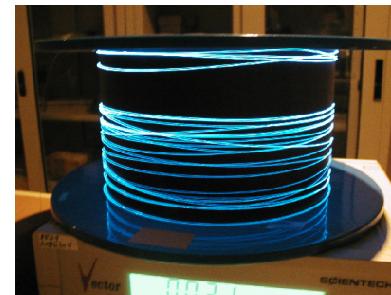

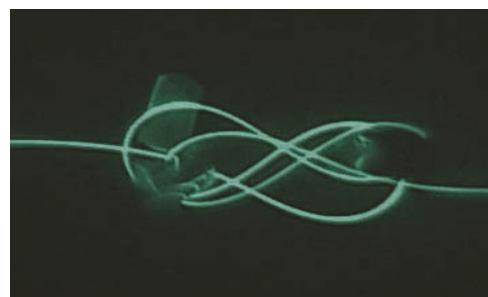

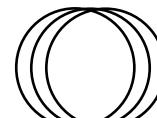

conventional fiber

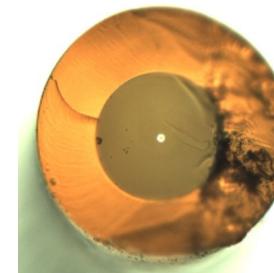

signal source

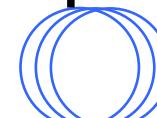

100 km

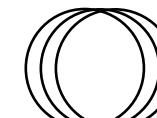

conventional fiber

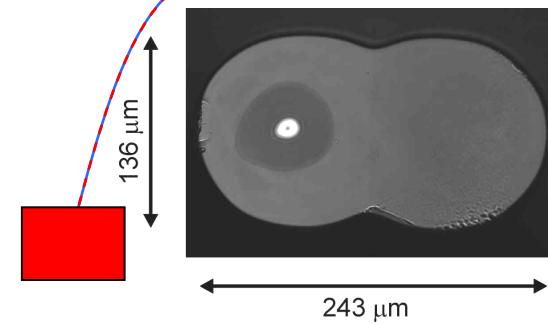

fiber amplifier

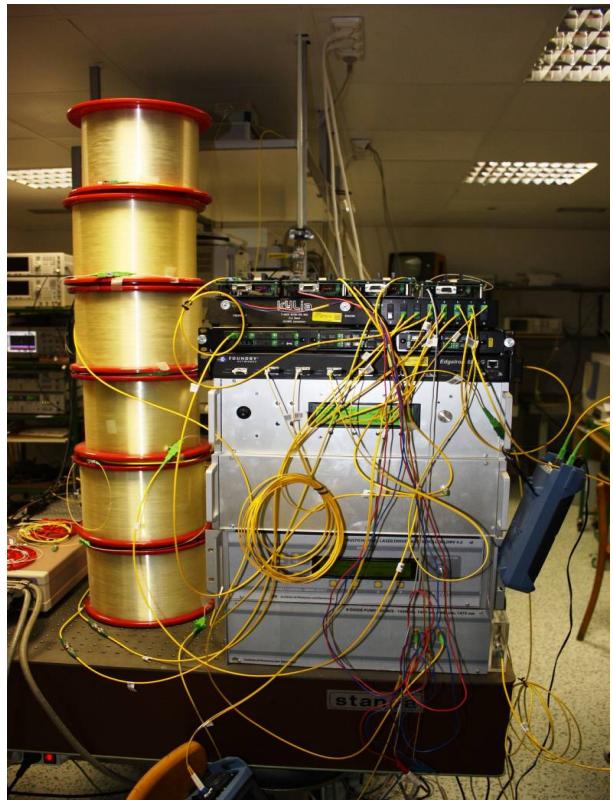

detector

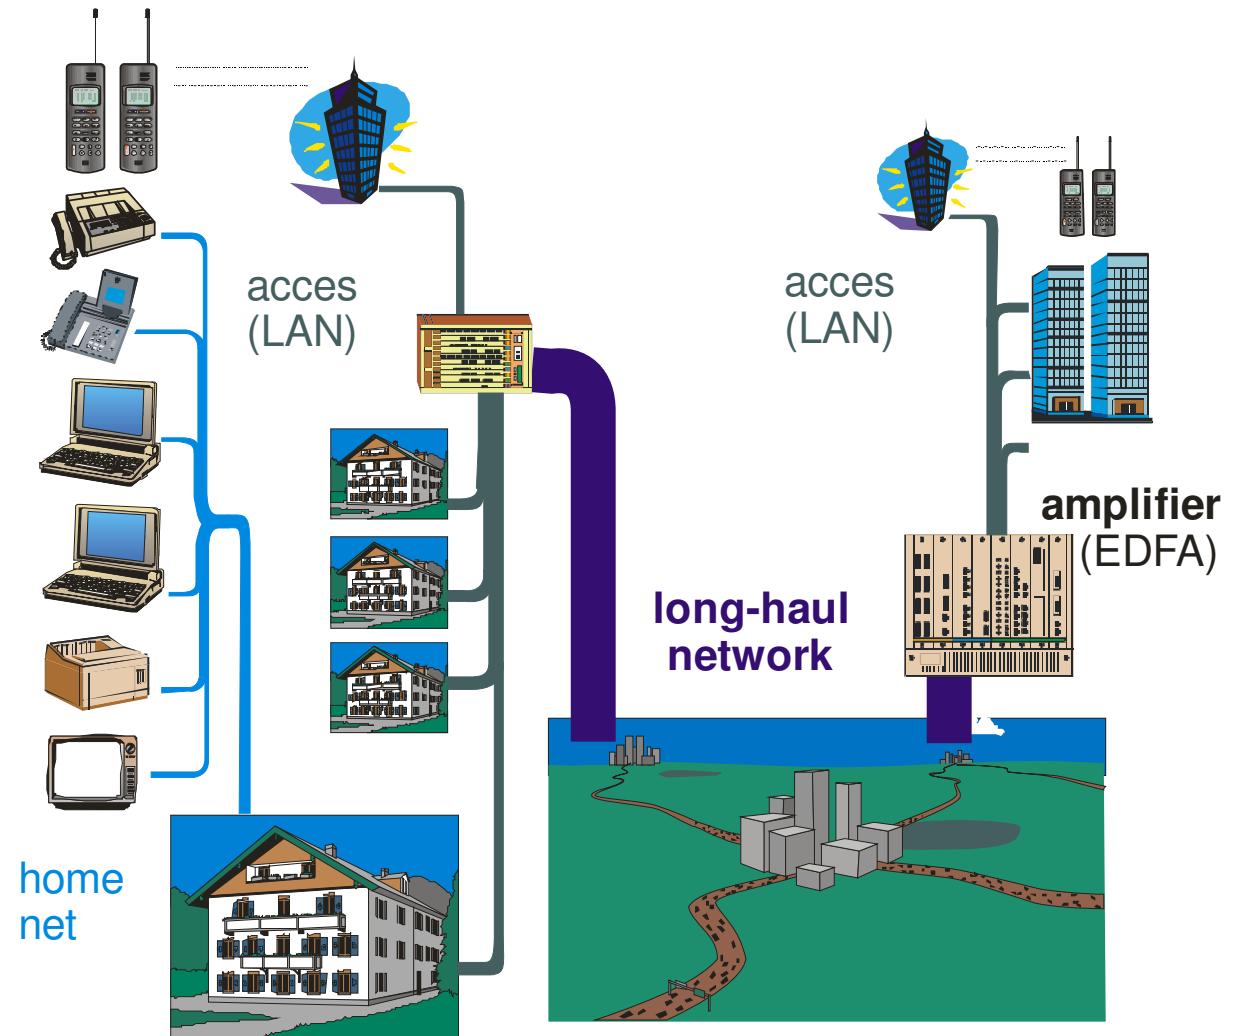

Pump source

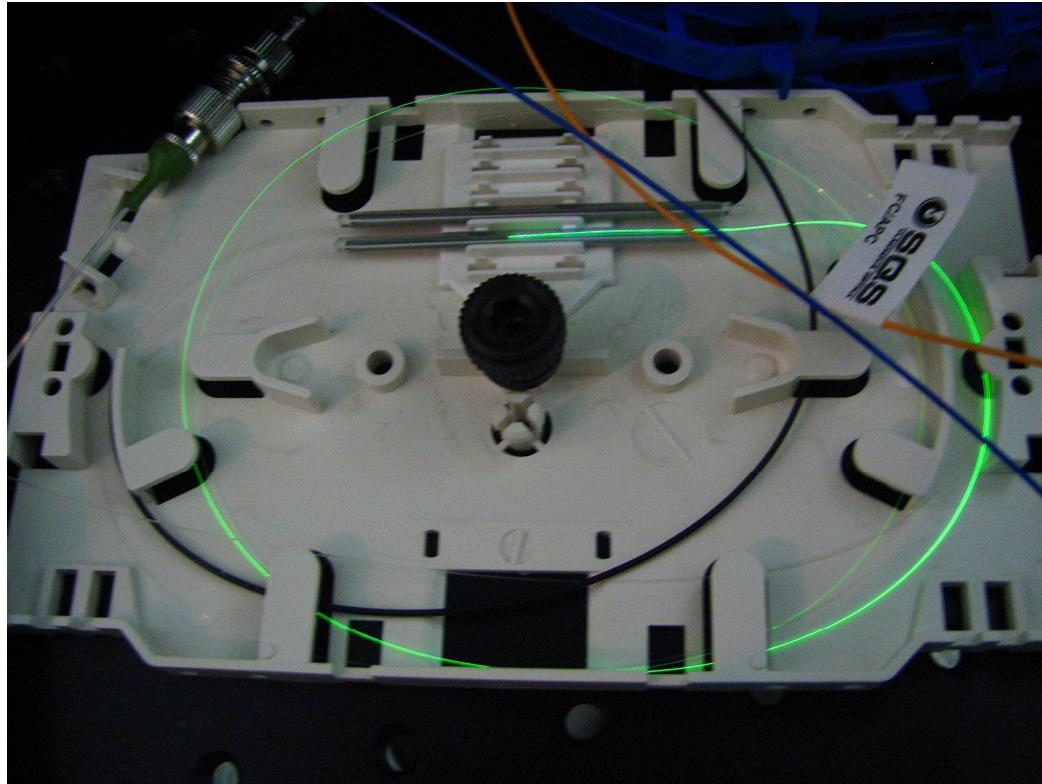

Telecommunication optical lines

200 km telecom line
testing

High-power fiber lasers

Er- fiber laser,
pulsed 197 fs,
5m rezonator
Liekki

PALS

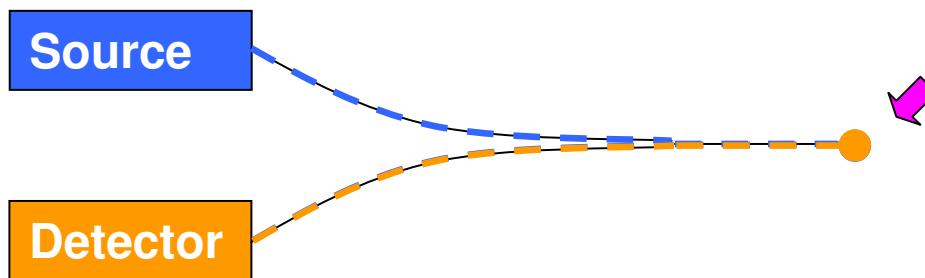

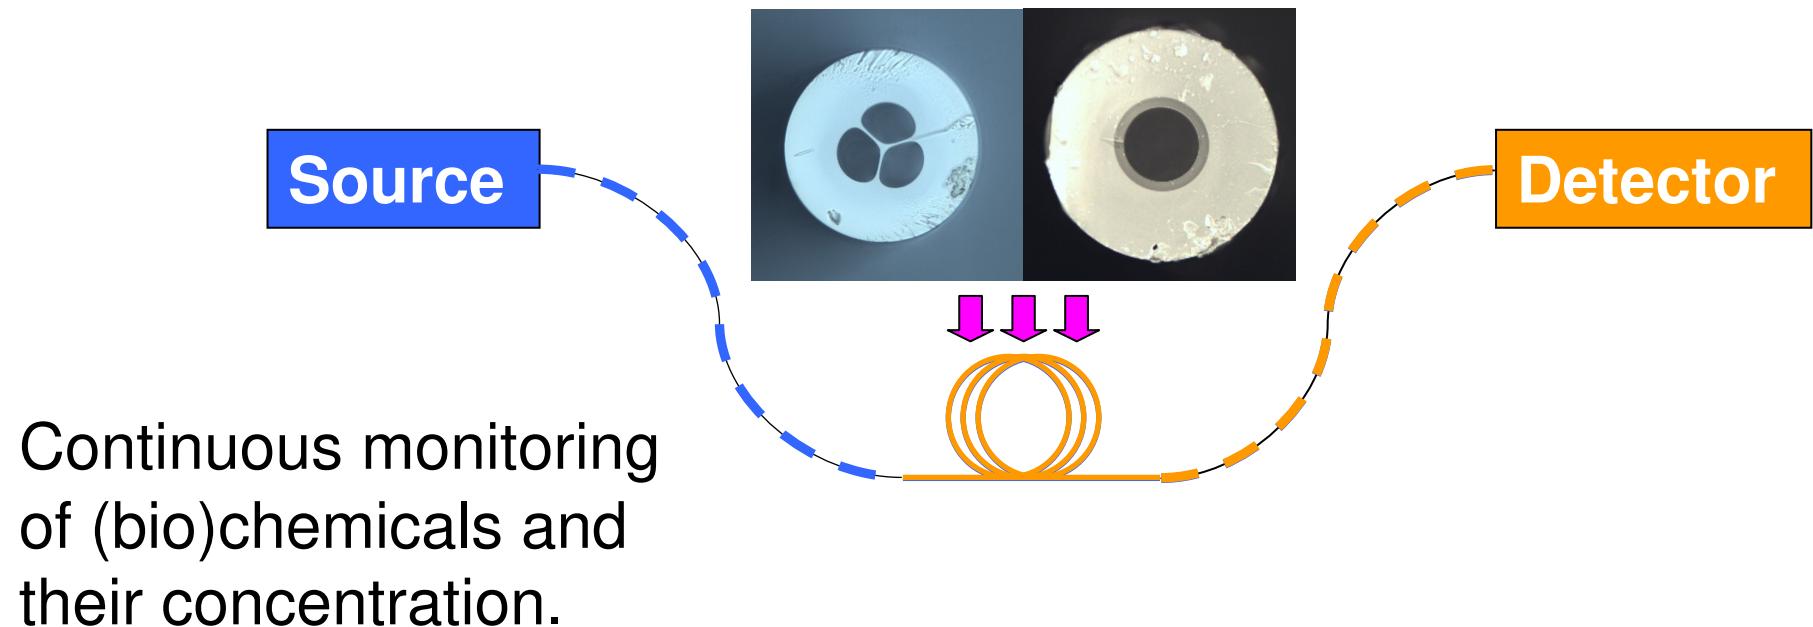

Ligh intensity
Sun 63 MW/m^2
Optical fiber 12.7 GW/m^2

Welding, cutting < 2kW

Optical fiber sensors

Suitable for :

- remote sensing
- flammable or explosives
- in high-voltage areas
- human body
- distributed sensing

Refractometric sensor of hydrocarbons

Early warning system of petroleum leakage

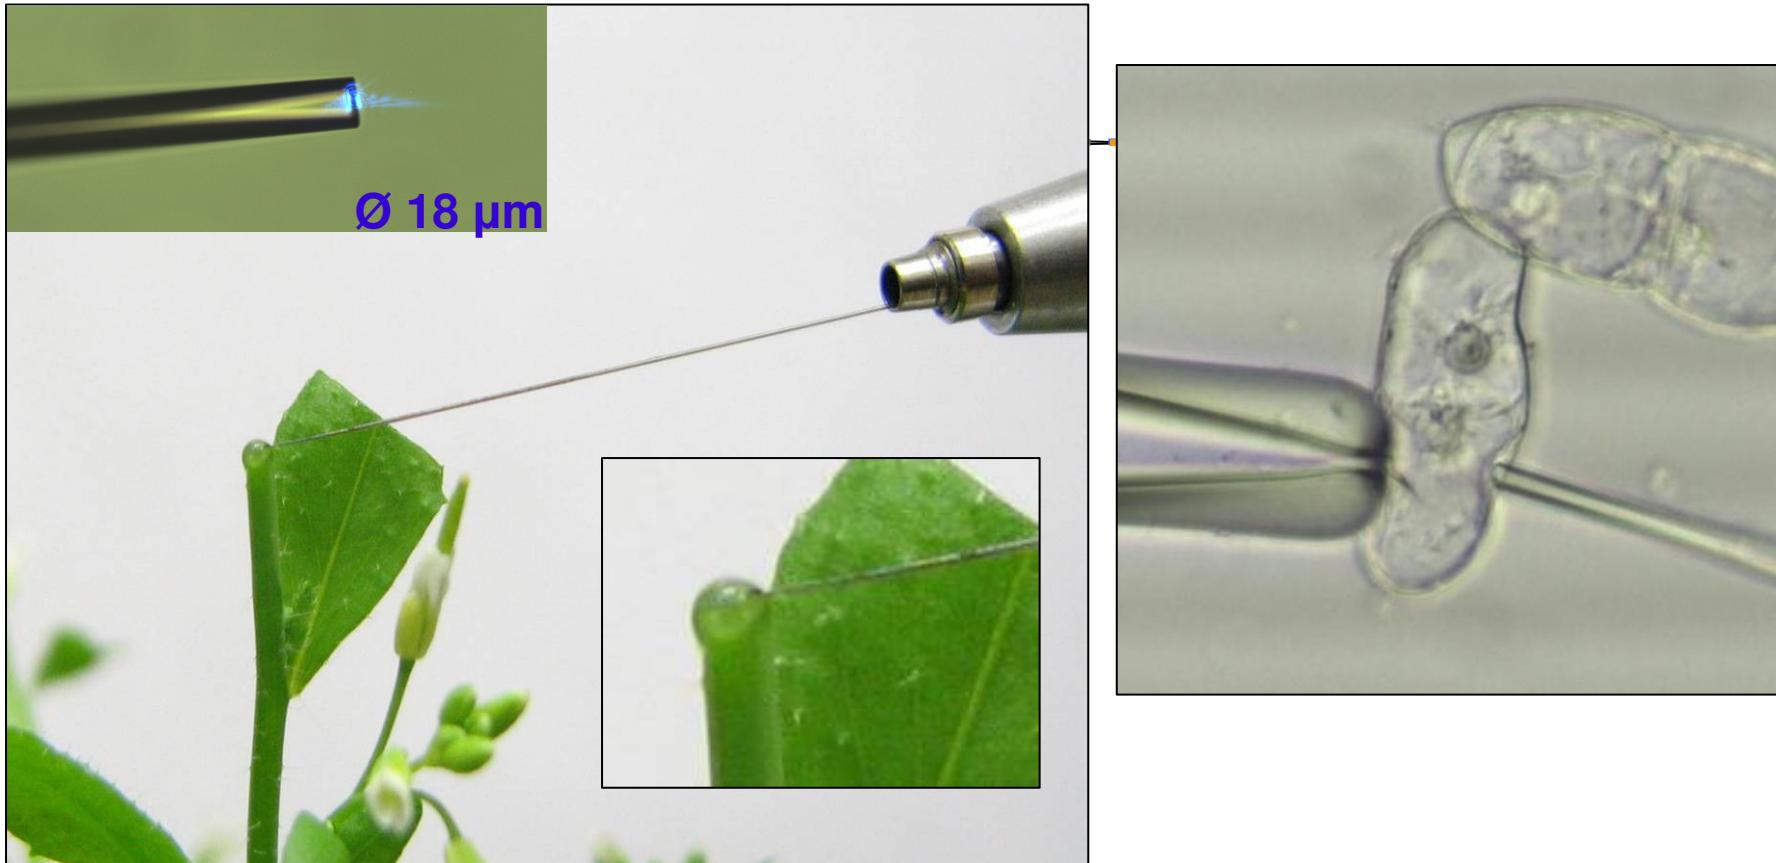

Limit of detection ~ 3-5 mg/l (EU limits)

Response time ~seconds

Optical fiber sensors

Detection of pH in small samples (droplets, cells)

Be UFE !

- **STUDY** (diploma, thesis)

Czech Technical University

Charles University

Institute of Chemical Technology

- **PROJECTS** - partners CZ

- **INTERNATIONAL** - collaboration

Be carefull !

Investigative journalist = investigative chemist ?

EXCURSION

1. Preform preparation (MCVD) + 2. Fiber drawing

Thank you for attention

Collaboration – international

Fibers for medicine

In

collaboratio
n

- Angioplastics
- Recovering of arteries (legs, heart) by application of intensive laser pulse (~1 W) followed by enlargement by balloon.
- Fotodynamic diagnosis and therapy
- Prevention and cure of malignant tumors.
