

Q-PHASE

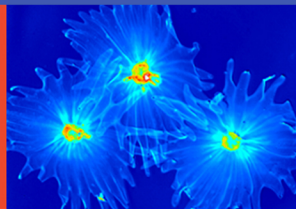

instrument for quantitative phase imaging

CZECH-BIOIMAGING & TESCAN seminar

26 November 2015

Institute of Molecular Genetics, Vídeňská 1083, Prague 4

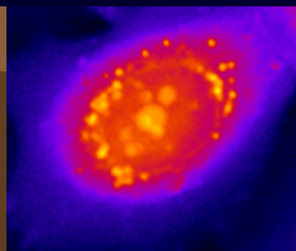

Q-PHASE is a new instrument for quantitative phase imaging based on coherence-controlled holographic microscopy. It allows observation of living cells without the necessity of fluorescent staining.

Programme:

Morning session - presentations about the technique and its applications

Afternoon session - a "hands on" course on the instrument

Register please at: <https://greception.com/form/f2d311de>

Registration deadline: 11 November 2015

Further information will be distributed to registered participants and also available at: <http://www.czech-bioimaging.cz/>
