Sciences of the Czech Republic

Prague

# John Horgan: The End of Science

Addisson Wesley, 1996

- Have all big questions been answered?
- Could scientists formulate a theory of everything?
- Could they completely explain mystery of universe, matter, mind, etc. ?
- Is absolute truth attainable?
- Etc ...

# John Horgan: The End of Science

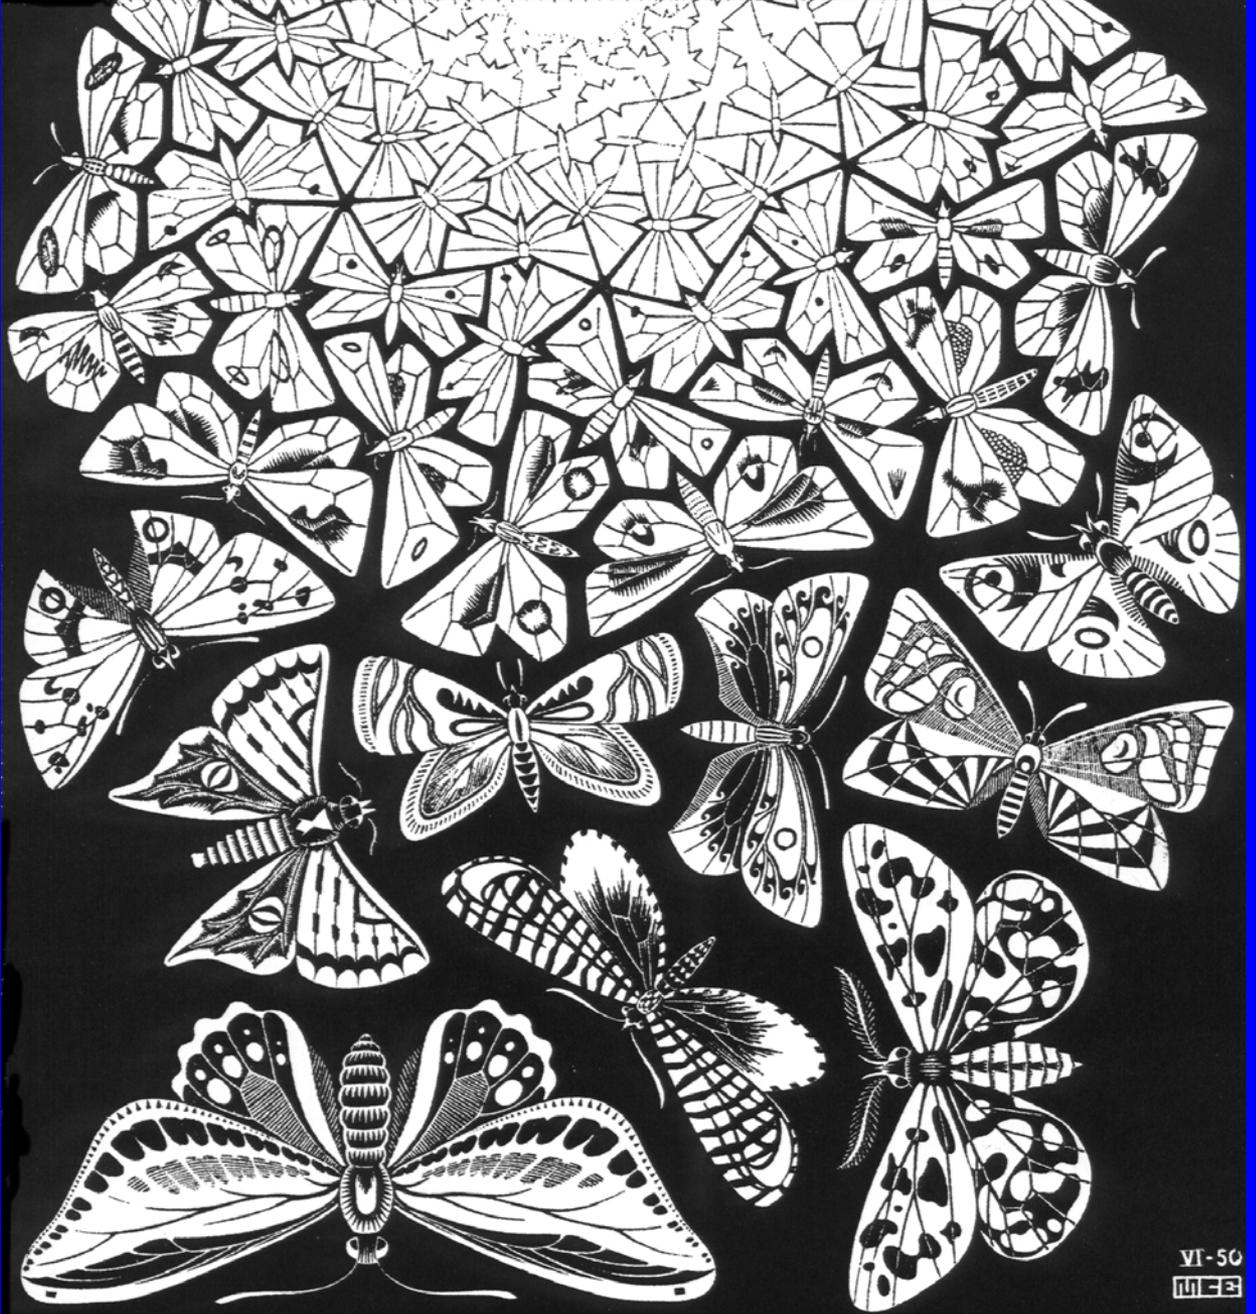

with chapters

- The End of Philosophy
- The End of Physics
- The End of Cosmology
- The End of Machine Science
- ...
- The Terror of God

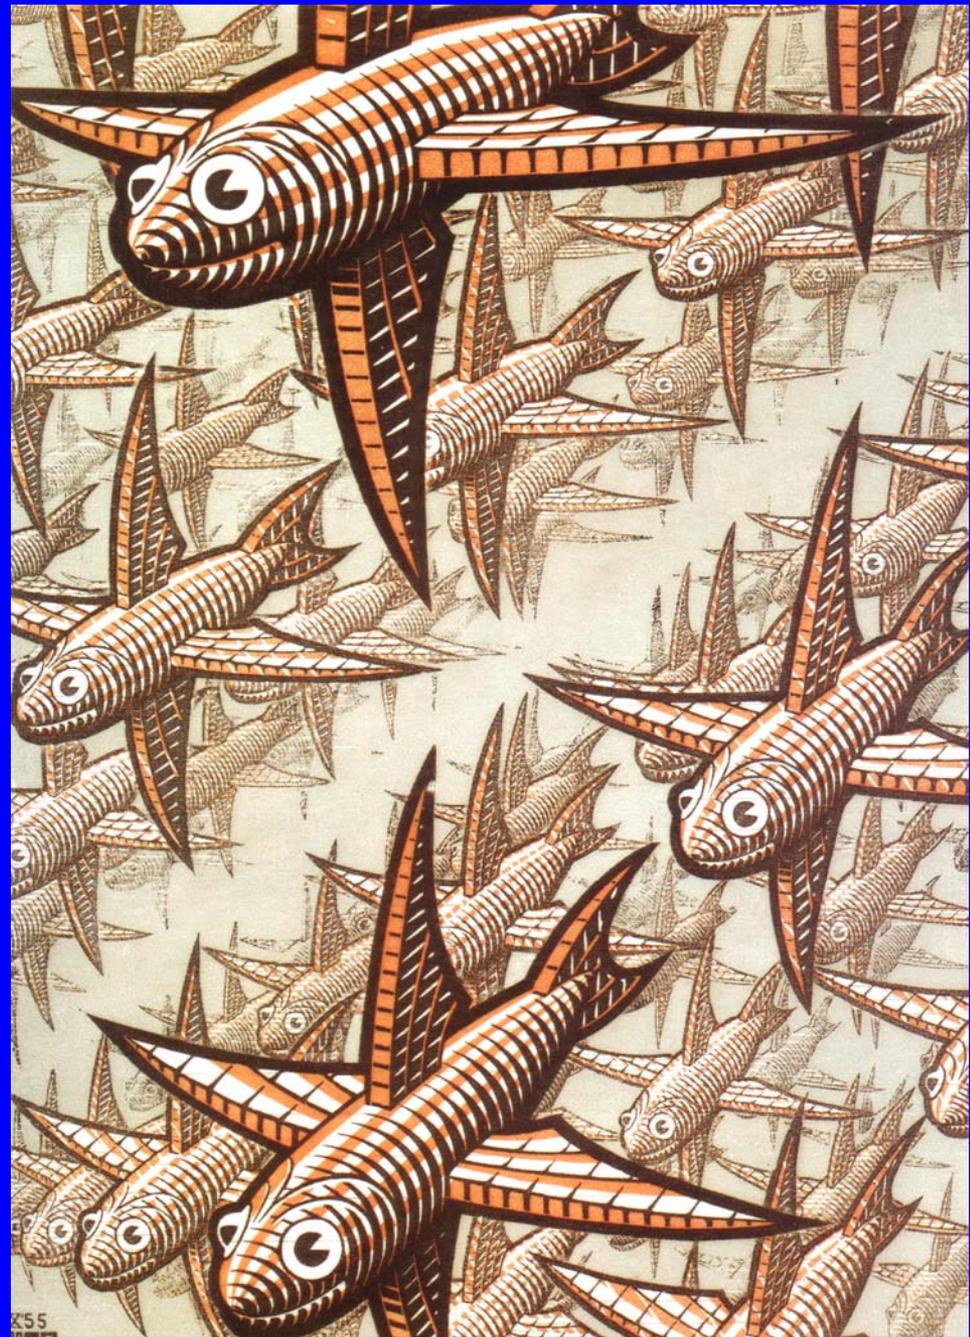

# What are we contributing to?

- No fundamental laws and principles since Newton's time
- Newtonian physics – low velocities
- Continuum mechanics – no quantum microcosms
- Rather more sophisticated models, that either work or do not ...
- The question of truth is irrelevant ... only 'proved' by experiment

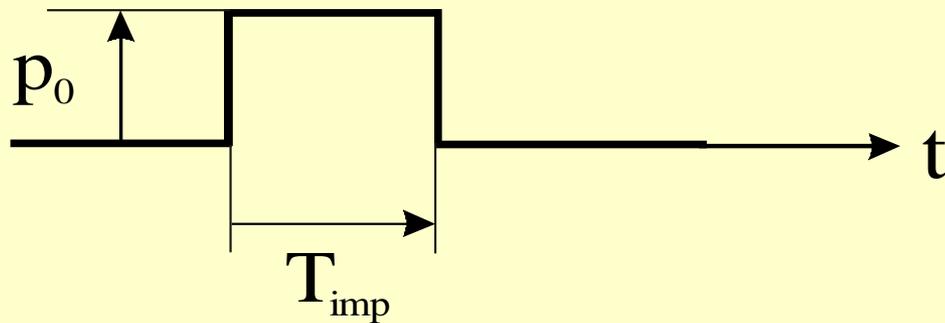

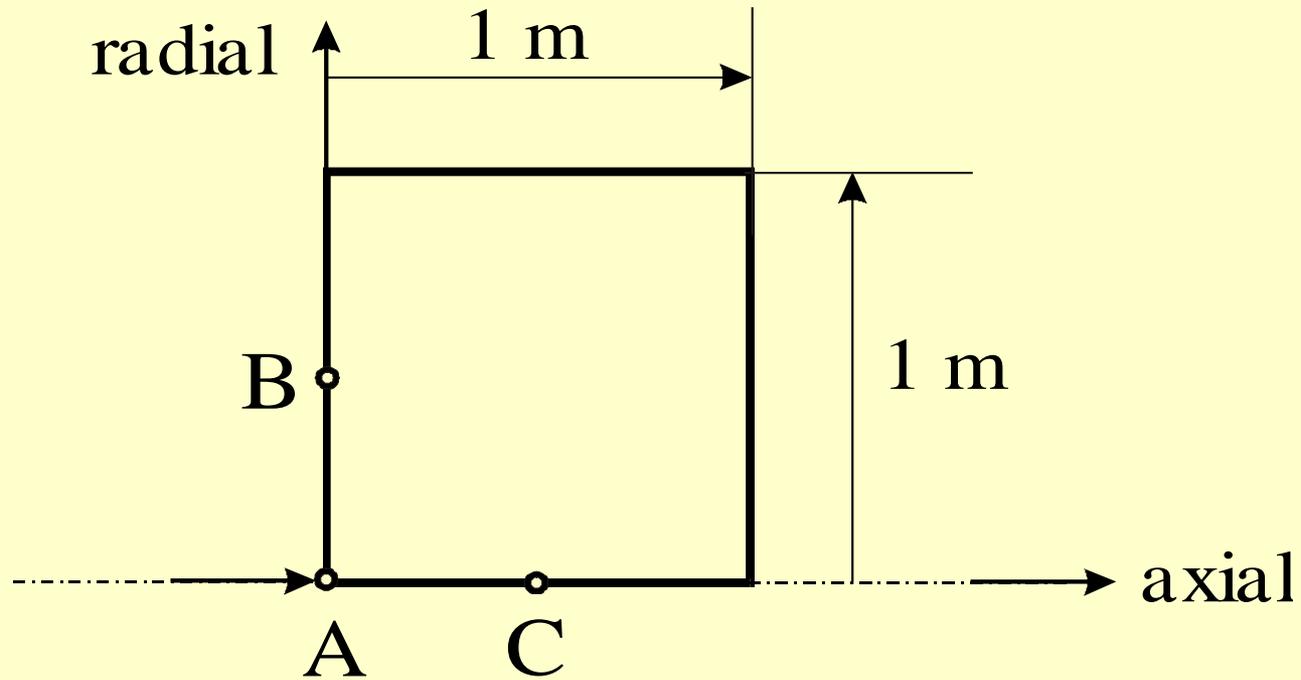

# C.M. Esher discretization

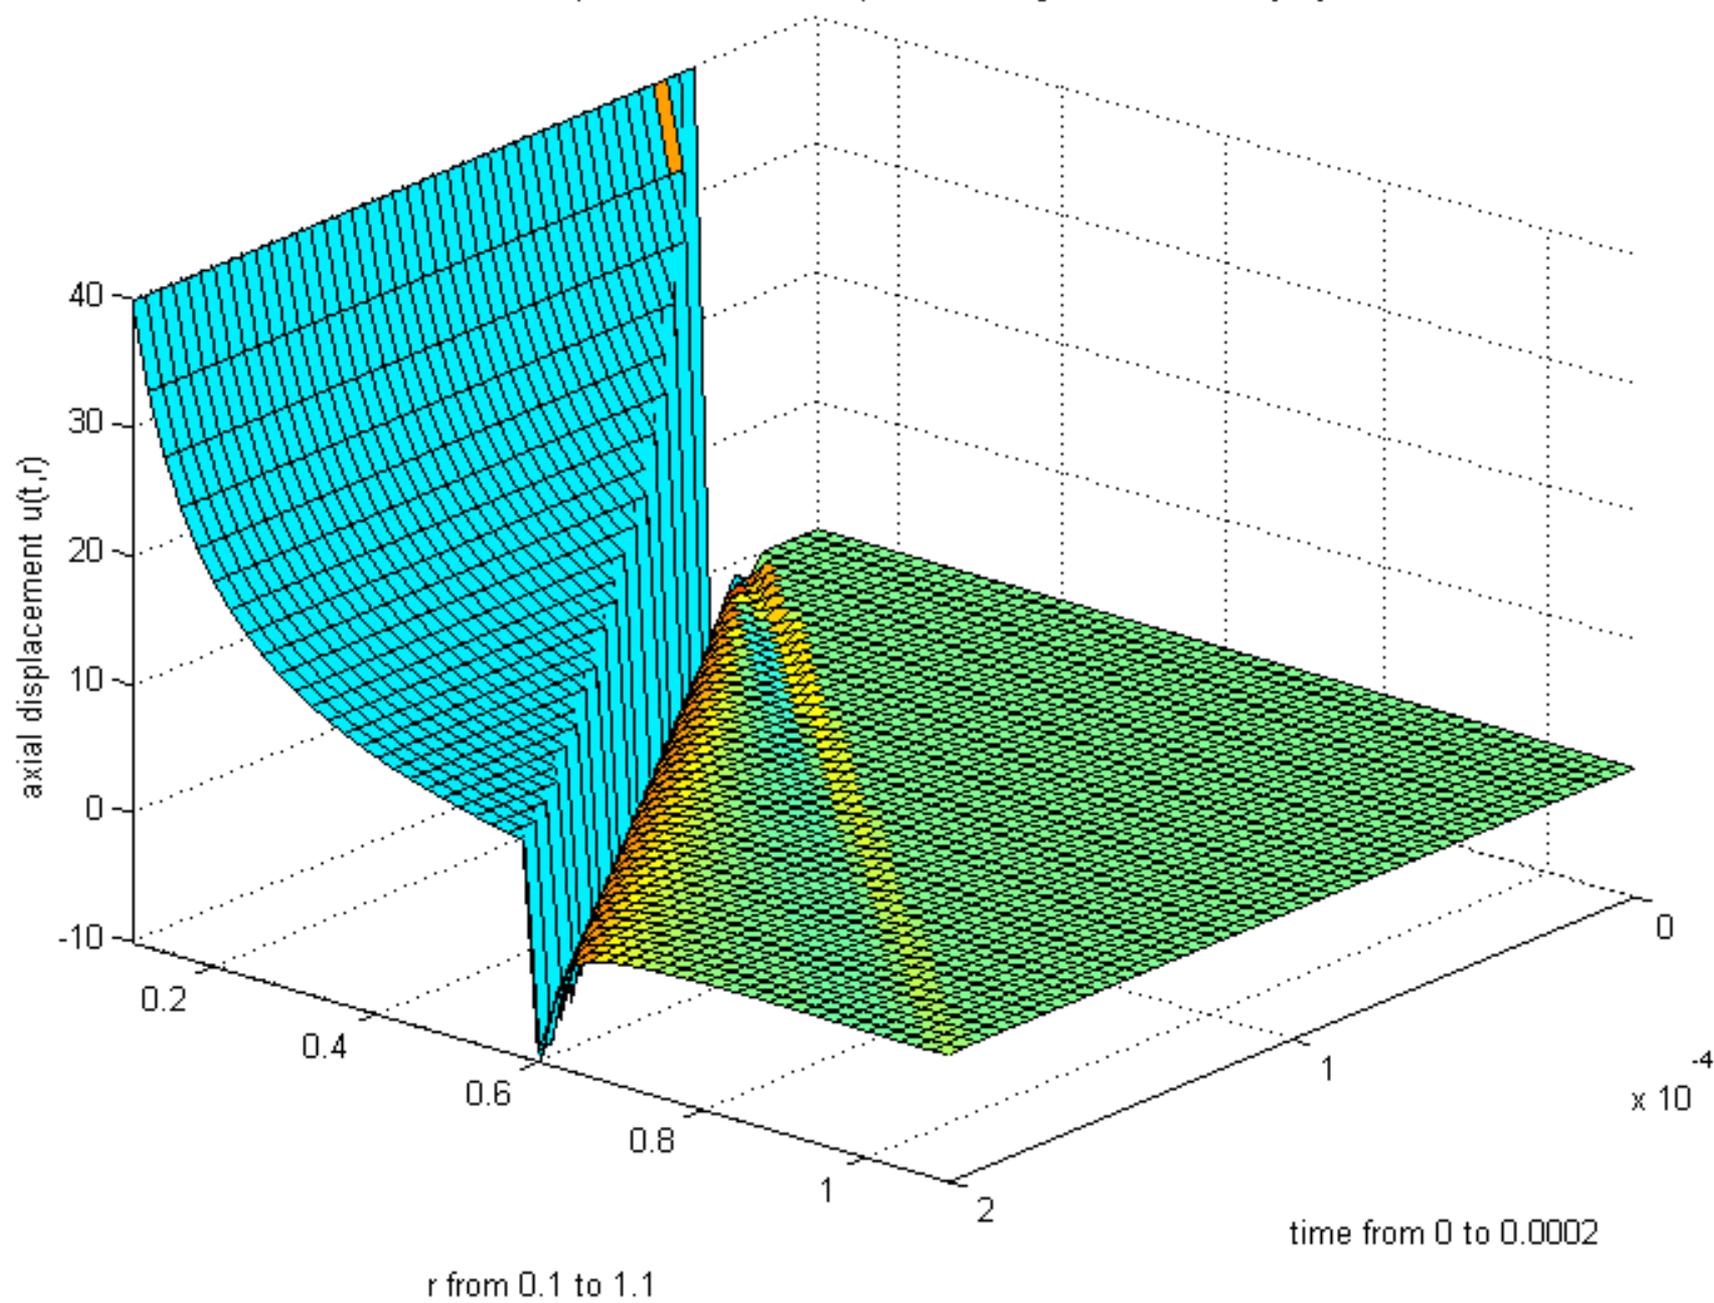

# C.M. Esher parallelization

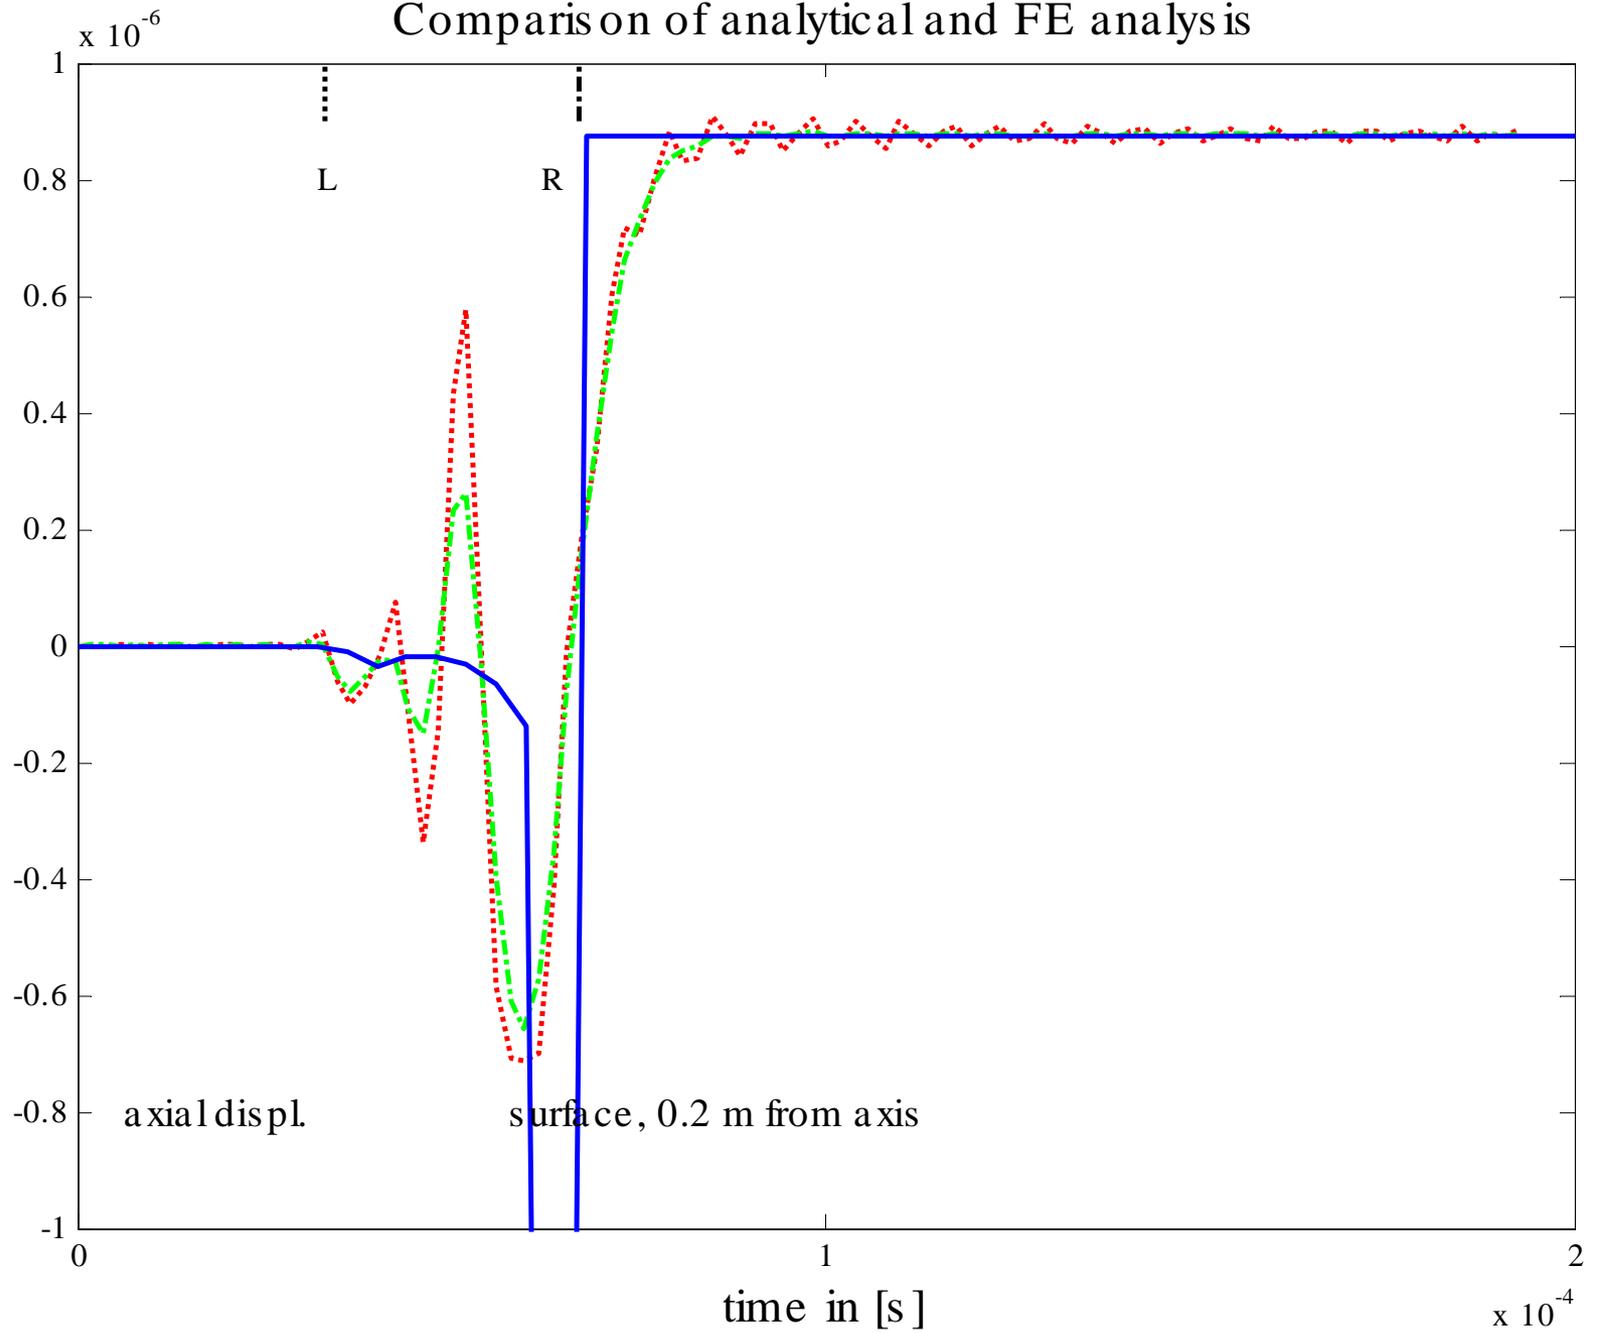

# Classical Lamb's problem

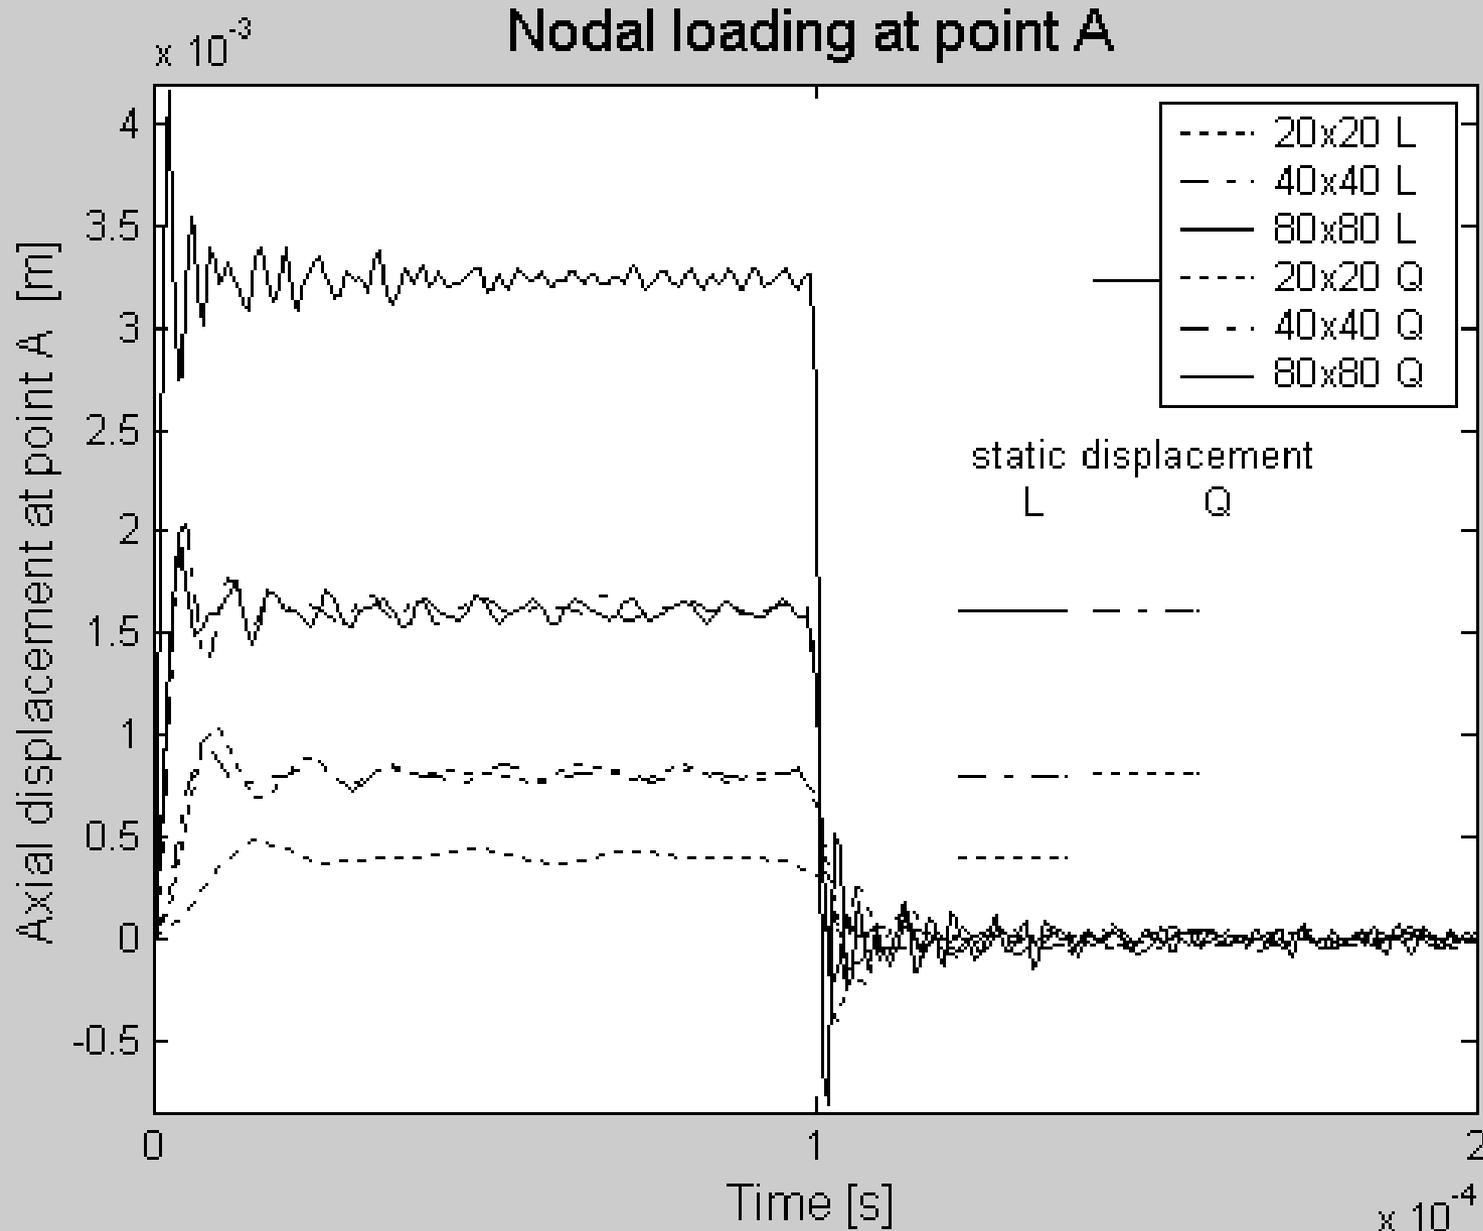

Lamb 3D problem, Heaviside pulse loading, After Pekeris [34]

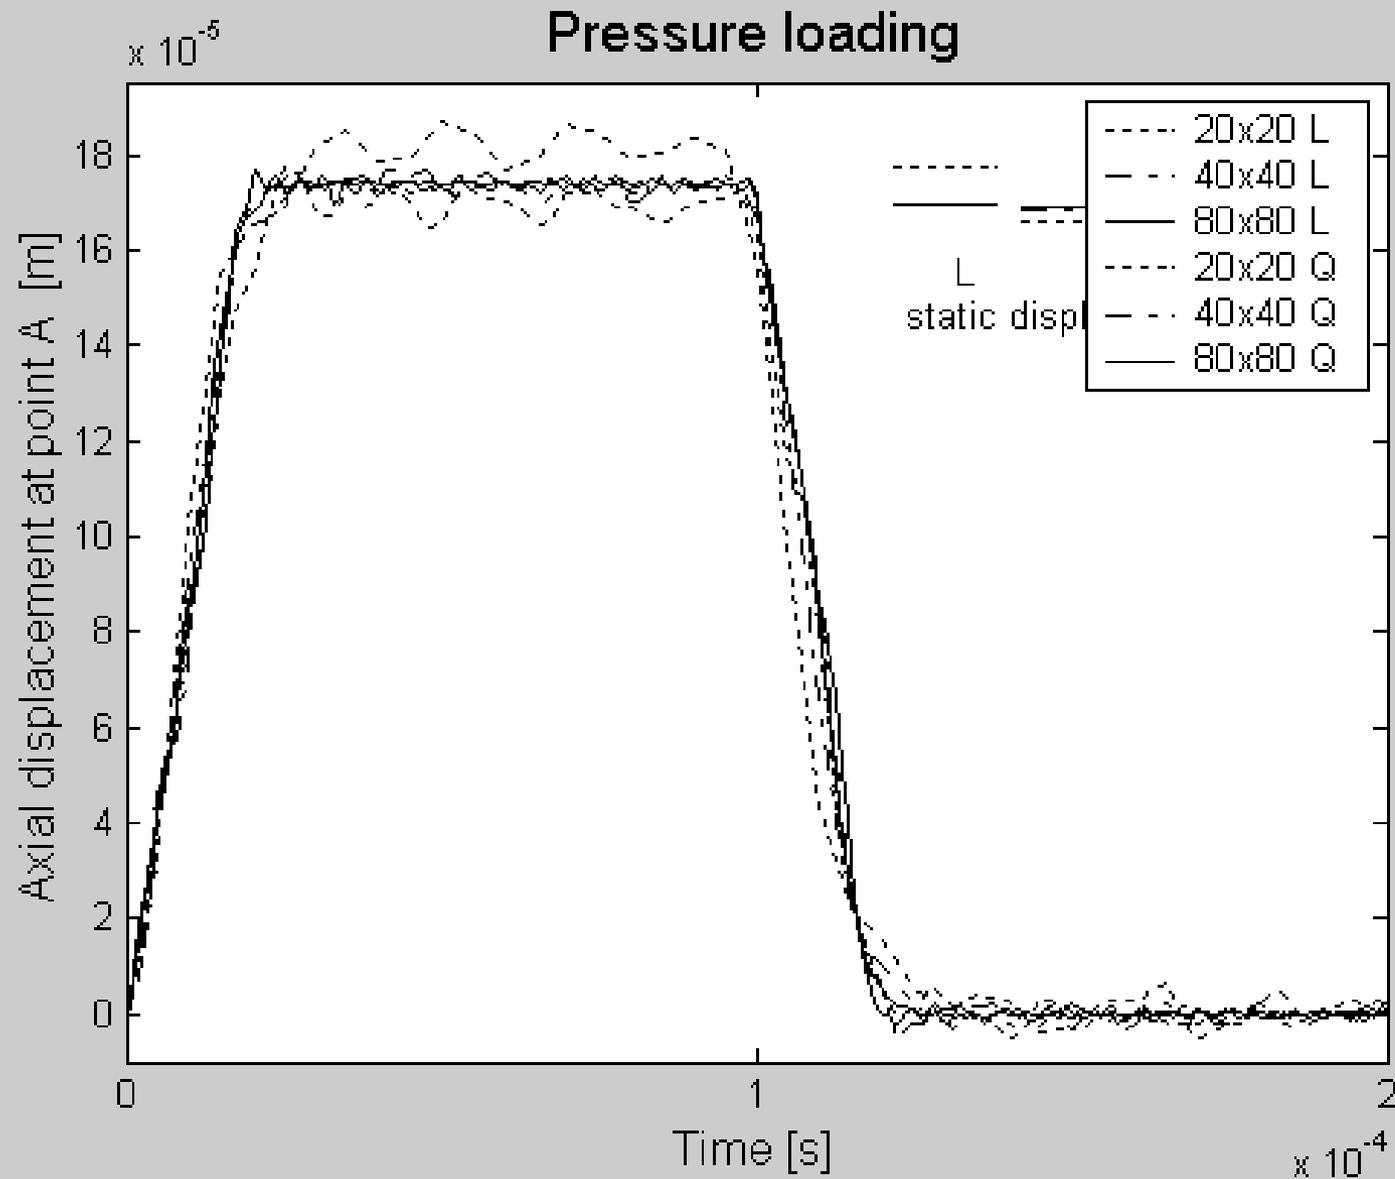

# Comparison of analytical and FE analysis

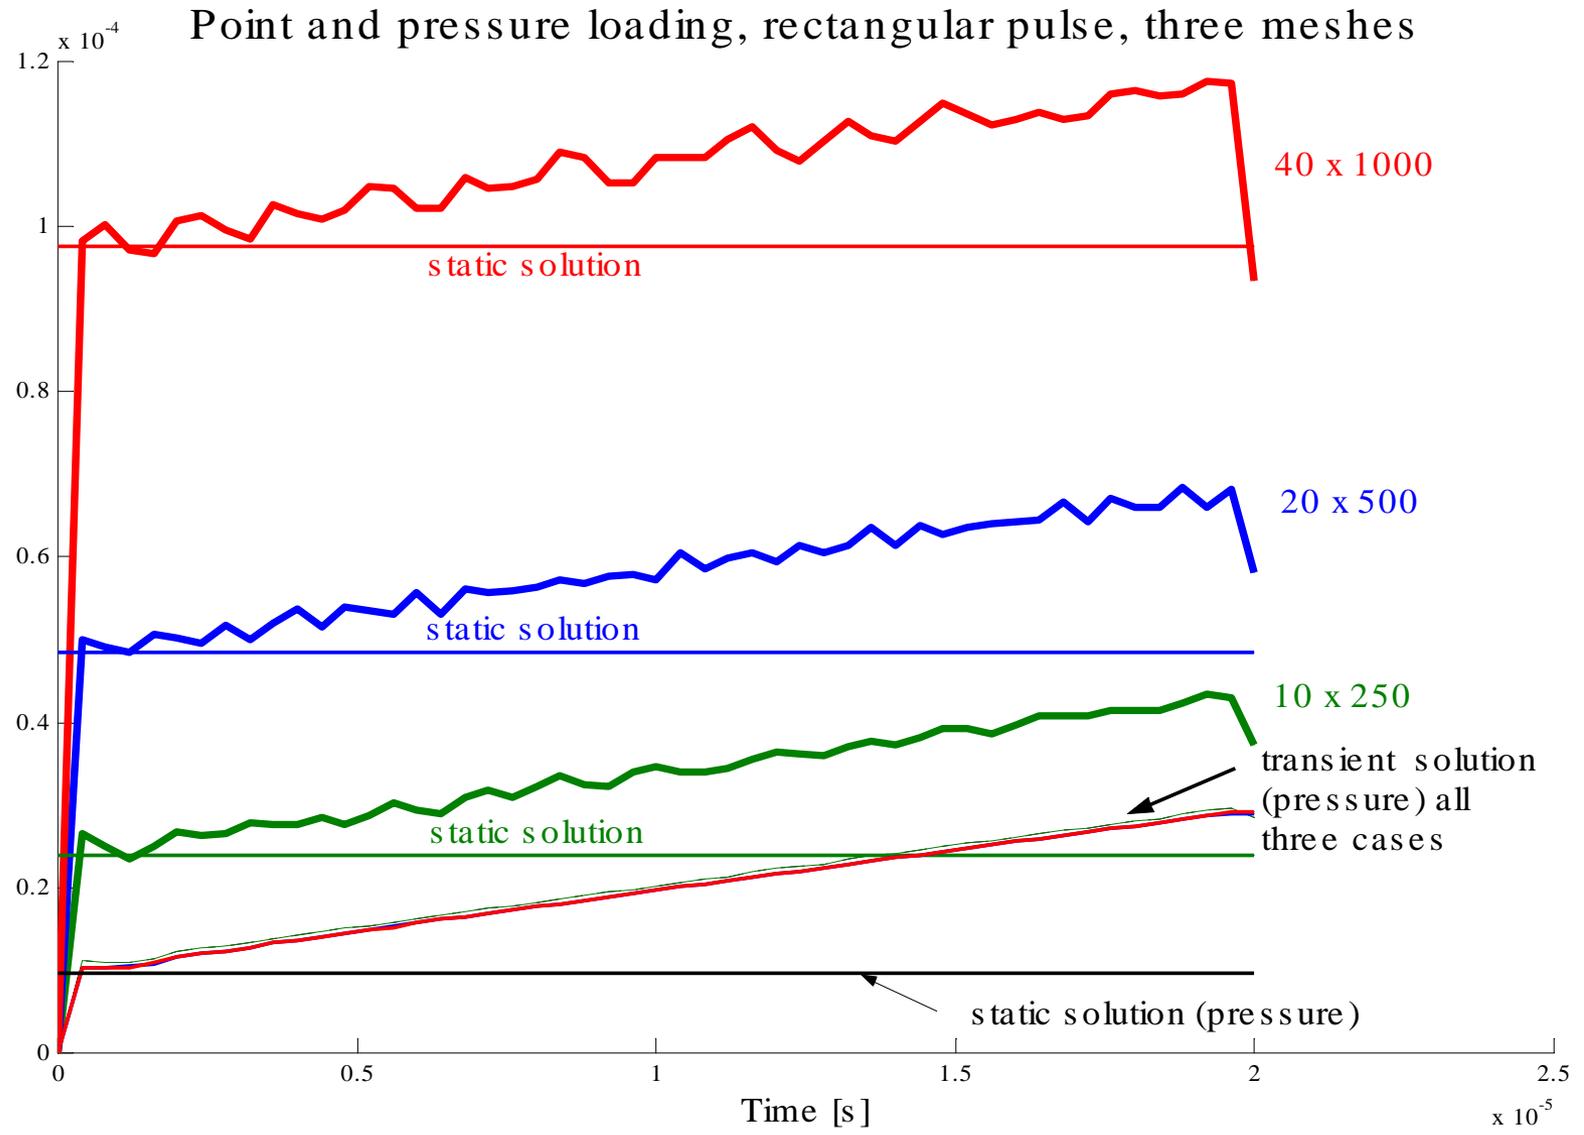

# Axial displacement for a point force loading

# Axial displacement for pressure loading

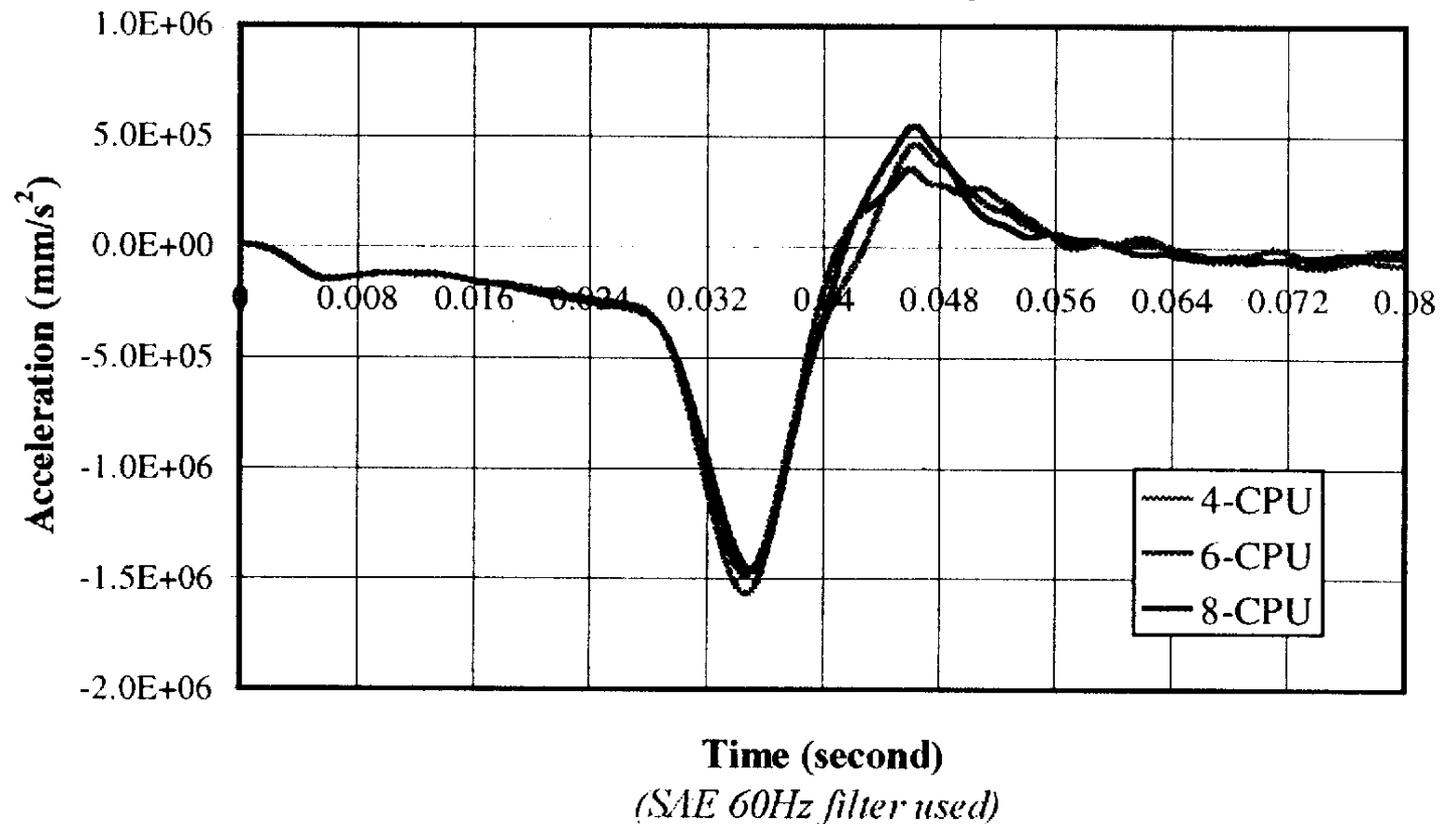

# Plate, axial displacements under loading

# Modelling depends on the number of CPU's

**Engine-bottom acceleration for MPP runs using 4/6/8-CPU**  
*(Using Accelerometer Option)*

# How to avoid false perspectives?

- There are
  - Solid theoretical foundations
  - Efficient hardware
  - Quickly developing parallel and vector sw
- Goals
  - Ascertaining validity limits of models ... material data are needed
  - Design of robust solvers running on parallel platforms

# Doubtful results and figures

- Could be a source of mental joy, pleasure and inspiration
- The future of finite element analysis does not seem to be as bleak as suggested by John Horgan
- The useless up and down motion which actually could be down and up one should be avoided

# C.M. Esher\_Ascending and descending
