

A NOTE ON HISTORY OF ORGANIZING FLUID DYNAMICS COLLOQUIA IN THE IT AS CR

Jonáš Pavel

Institute of Thermomechanics AS CR, v.v.i., Praha

The history of the organization of the Fluid Dynamics Colloquia started in 1992. This was a time period of big changes in the organization and funding of sciences starting on 1990 in, at that time still, Czechoslovakia. Some state institutes of research and development were liquidated. The Treasury Department refused foundation of the fund for science on principle. The state research plan was abolished. Disintegrating companies stopped funding of research and development. Then the CSAV established an internal grant system in 1990 with regard to social situation, within the process of modernizing academy and as to stabilize the working conditions in the academy institutes.

One of the consequences of the termination of the state research plan was that the opportunity coming together every year disappeared for many researchers in fluid mechanics and heat exchange. The IT staff regularly organized those meetings in recent memory, in framework of the state research plan. Therefore the management of the IT felt a moral duty substitute these meetings and decided to organize the Fluid Dynamics Colloquia by the institute's staff. The director of that time, Rudolf Dvořák, signs invitation to the first FDC on January 1992. The established objectives were to demonstrate the range and the level of present research in fluid dynamics and contribute to the mutual knowledge and cooperation among experts in the Czechoslovak Federal Republic.

Since that time, a lot of changes came into being: the state splits up into Czech Republic and Slovakia, the name of our Academy of Sciences changes, the official language transforms into English only, a simple slide projector and later an overhead projector were replaced by a video projector but the purpose of the Colloquium and discussed problems stated in 1990 are still alive.

Twenty years history deserves a short review of benefits coming from the organizing of FDC.

The main aim was the preservation of a possibility coming together for researches of our community. The number of those interested in the attendance can serve as the criterion of this aim achievement.

In the course of time – up today – the list of participants attending at least one colloquium contains 408 names including 62 names of foreigners from 10 predominantly west European countries. This list, compiled from the Proceedings of individual FDC, is a part of the extended version.

The total number of registered participants is 1044 persons (82 from abroad). The attendance fluctuated in course of time as shown in the Figure 1. Maximum, 74, participants attended the 11th Colloquium in the year 2002 and the minimal turnout (21) was last year. Actions focused on related problems

organized in Liberec and Plzeň during 4th calendar quarter take away the interest from FDC.

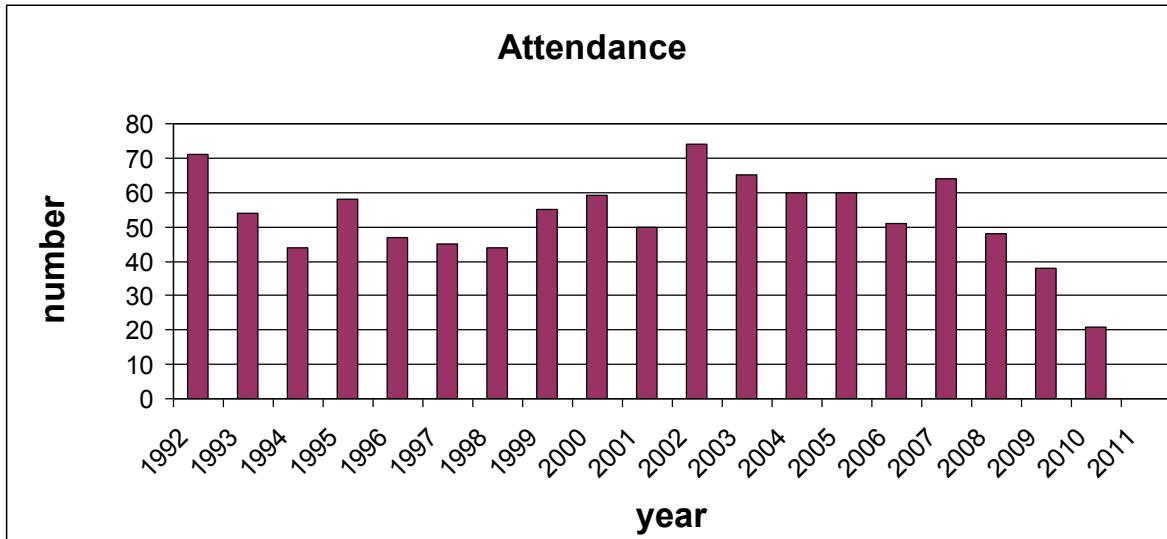

Figure 1 – Number of participants in FDC since 1992.

Another expected benefit of the colloquia organization was the mutual acquaintance with solved problems and achieved results. This expectation comes true. More than 733 contributions altogether was presented since 1992. Contributions dealt with received results on various experimental investigations, numerical simulations and theoretical studies of laminar, transitional and turbulent shear flows in the external and internal aero-hydrodynamics and also results were discussed of studies on environmental aerodynamics, biomechanics, new experimental and numerical methods, new experimental equipments and some further natural and industrial applications.

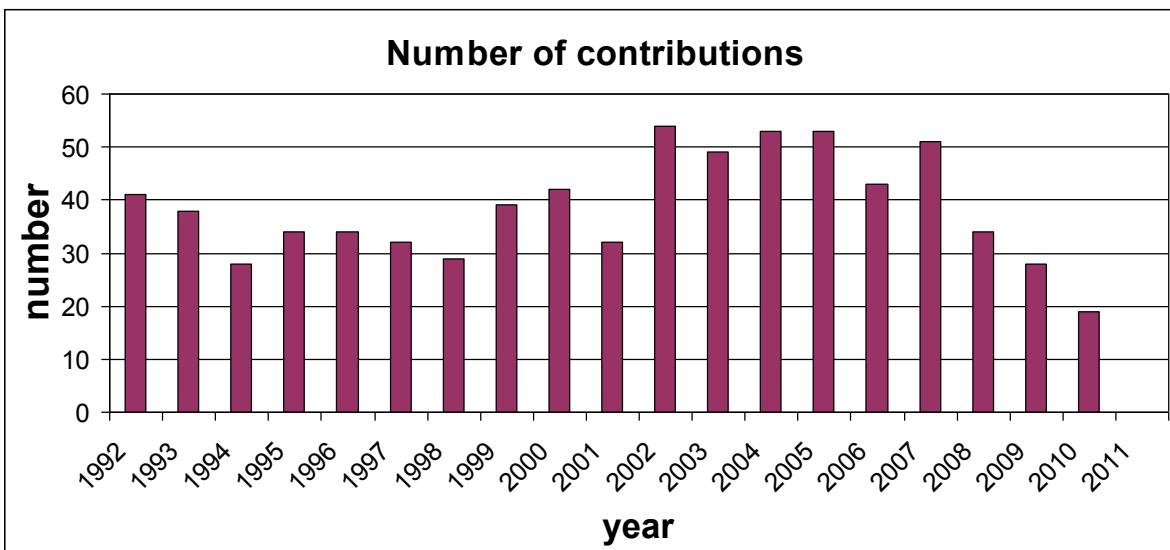

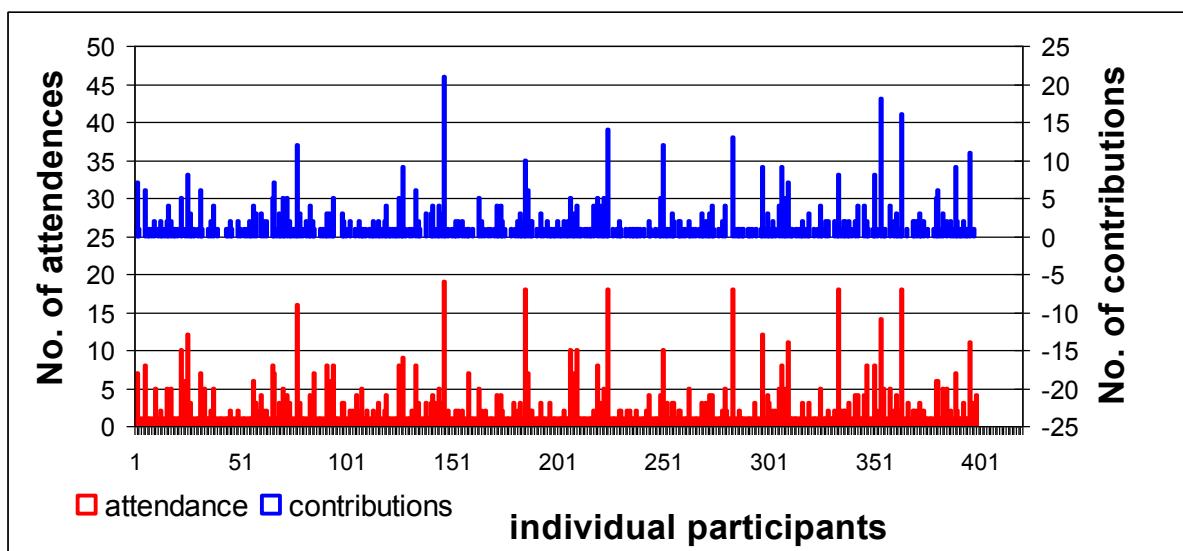

Figure 2 – Number of contributions in the individual FDC since the year 1992.

Presentations on posters become popular since 1999. More than 180 poster- presentations were shown. The fluctuating numbers of contributions to the individual colloquia are shown in the Figure 2. The average number of contributions is 39 per colloquium.

It would be probably interesting a look to the Table 1 with the List of participants being present at least at one colloquium. The List was compiled from the published Proceedings of the Fluid Dynamics colloquia. Together with names are numbers of attendances and presented contributions shown in the Table 1. It should be mentioned that mostly a contribution has more than one author. The authorship was assigned to the first one in the sequence of authors who paid the conference fee with regard to the rule “one conference fee = the claim publish one contribution”; exception are the invited lectures. Numbers of attendances and contributions of individual colloquium participants are plotted in the Figure 3.

Conclusion

The author believes that the organization of the Fluid Dynamics Colloquia was meaningful and their assignment was fulfilled. Some modifications should be assumed with regard to present conditions of the research evaluation and funding.

Table 1 - List of persons registered at least once on FDC.
 (Compiled from the published Proceedings of the Fluid Dynamics Colloquia).
