

# Deflection of the Mělník bridge

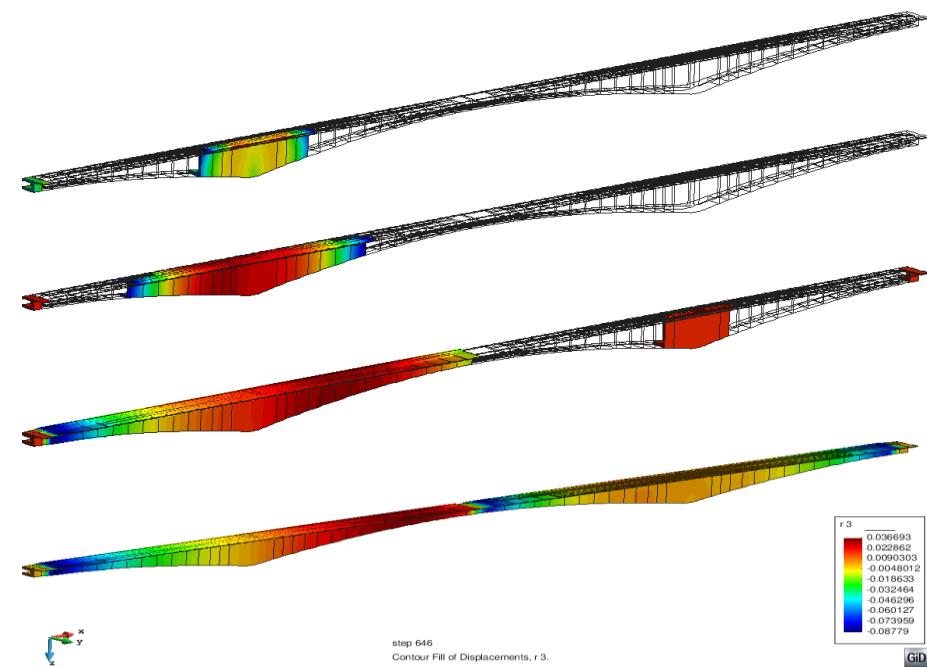

## Challenge

Analysis of excessive deflection of new prestressed concrete bridge over Labe river in Mělník.

Three-dimensional non-linear time dependent mechanical analysis.

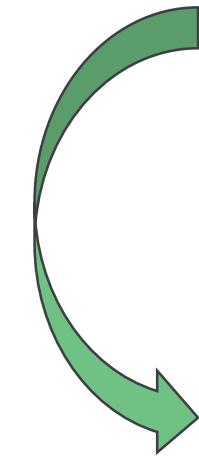

## Goals

- Estimate deflection of the bridge in future.
- Suggest possible method of reconstruction.
- Modelling of gradual construction of the bridge.

## Benefits

Detailed numerical analysis revealed deflection of the bridge in accordance with measurements. Reconstruction of the bridge is not necessary at this time.
