Programme:

6.30—7.00 PM **Are Password Managers Improving our Password Habits?**

David Ng

David Ng has been leading technology development projects to ensure security and privacy for over 15 years. Currently, Ng is completing the master of information and cybersecurity program at UC Berkeley at the School of Information while working full time as a Privacy Program Manager at Facebook Inc. Ng previously held the position of Senior Manager of Application Security at PwC providing application security solutions and strategy for internal member firms. Prior to PwC, Ng enjoyed working in software engineering at DreamWorks Animation as well as a DreamWorks Animation venture business where he built 3D rendering platforms for companies such as Nike Inc. Ng received his bachelor of science degree in computer information systems and philosophy from Cal Poly Pomona.

Abstract:

Password manager adoptions are becoming the norm these days, but are they also encouraging best practices for its users? Do they use complex and unique passwords or do they just store weak passwords? We will look at analysis revealing that many users ignore password reset notifications and attempt to find a path that incentivizes users to reset their password and use their password managers as intended.

7.00—7.30 PM **Discussion**
